ASSESSING THE RELATION BETWEEN MUSIC PREFERENCE AND PERSONALITY TYPES IN EXPATS IN THE UNITED ARAB EMIRATES

A Project Report by

RIYA MATTOOKKARAN

(1747006)

Submitted in partial fulfilment for the award of the degree of

Bachelor of Science in Forensic Science

Under the guidance of

Dr Naushad Rais

School of Life Sciences

Manipal Academy of Higher Education- Dubai Campus

June 2020

CERTIFICATE

This is to certify that the work entitled "*Assessment of the relation between music preference and personality types in expats in the United Arab Emirates*" is the bonafide work done by **Riya Mattookkaran** (Exam no. 1747006) and is submitted to School of Life Sciences-Manipal Academy of Higher Education, Dubai Campus, in partial fulfilment for the award of the degree of BSc in Forensic Science, during the academic year Sept. 2017- June 2020.

This work has not been included in any other thesis/dissertation submitted previously for any other degree or certificate.

Dr. Naushad Rais
Guide
Assistant Professor
School of Life Sciences
MAHE-Dubai, UAE

Dr. Arif Hussain
Professor and Chairperson

MAHE-Dubai, UAE

DECLARATION

I hereby declare that the work presented in this report is the original work done by me under the guidance of Dr Naushad Rais in the School of Life Sciences, Manipal Academy of Higher Education, Dubai campus and is submitted in partial fulfilment for the award of BSc degree in Forensic Science. Further, the report is not part of any other thesis or dissertation submitted to any other university or institution to the best of my knowledge.

Riya Mattookkaran
Exam No. 1747006

ACKNOWLEDGEMENT

First and foremost, praises and thanks to the God, the Almighty, for His showers of blessings throughout my research work to complete the research successfully.

I would like to express my deep and sincere gratitude to my project guide, Dr. Naushad Rais, Assistant Professor, Manipal Academy of Higher Education, Dubai Campus, for giving me the opportunity to do this project and providing invaluable guidance throughout this research. His dynamism, vision, sincerity and motivation have deeply inspired me. He has taught me the methodology to carry out the research and to present the research works as clearly as possible. It was a great privilege and honor to work and study under his guidance. I am extremely grateful for what he has offered me. I would also like to thank him for his patience, support and empathy.

I am extremely grateful to my parents for their love, prayers, caring and sacrifices for educating and preparing me for my future.

I would like to say thanks to my friends for their constant encouragement. I express my special thanks to my friends who helped me in collecting the data required for this research.

I would like to say thanks to my friends for their constant encouragement. I express my special thanks to my friends who helped me in collecting the data required for this research.

Finally, my thanks go to all the people who have supported me to complete the research work directly or indirectly.

Riya Mattookkaran

ABSTRACT

The present study was conducted to assess The Relationship Between Music Preference And Personality Types in Expats in the United Arab Emirates . A structured questionnaire framed using Google forms was prepared using guidelines from the revised version of the Short Test of Music Preferences(STOMP) made by Rentfrow & Gosling in 2003 and The Big Five Inventory (BFI) developed by John & Srivastava in 1999. The data collection was carried out by circulating the Google link among students and their friends & families settled in the United Arab Emirates. The data thus collected was tabulated and analysed statistically. The demographic data revealed that 54.8% were Male and 48.2 % were Female with majority (80.8%) being Indian followed by Latinos and many other nationalities, the percentage of whom was less than 20 % in total. The age group ranged from 18-54 years with the majority being students (54.8%).

INTRODUCTION

Music could be a work of art, and social policy, whose medium is sound. General meanings of music incorporate regular components, as an example, pitch , mood , elements , and also the sonic characteristics of timbre and surface . Various styles or varieties of music may stress, de-underscore or overlook some of those components. Music is performed with an immense scope of instruments and vocal procedures running from singing to rapping; there are exclusively instrumental pieces, exclusively vocal pieces and pieces that join singing and instruments.

Basic colloquialisms, as an example, «the congruity of the spheres» and «it is music to my ears» point to the thought that music is frequently requested and beautiful to tune to. Be that because it may, twentieth century arranger composer believed that any solid are often music, saying, for example, «There isn't any clamor, just sound».

The creation, execution, essentialness, and even the meaning of music change as indicated by culture and social setting. To be sure, since the start, some new structures or varieties of music are scrutinized as «not being music», including Beethoven's Grosse Fuge string group of 4 of each 1825, early jazz within the start of the 1900s and in-your-face punk during the 1980s. There are numerous varieties of music, including well-known music, conventional music, workmanship music, music composed for strict services and work tunes, as an example, chanteys. for example, it all right could also be difficult to stick to a meaningful boundary between some mid 1980s hard rock and substantial metal. Inside expressions of the human experience, music could be delegated a performing craftsmanship, a compelling artwork or as a sound-related workmanship. Music could be played or sung and heard live at a live performance or ensemble execution, heard live as a feature of a sensational work , or it'd be recorded and tuned in to on a radio, MP3 player, CD player, cellular phone or as film score or TV appear.

In numerous societies, music could be a significant piece of individuals' lifestyle, because it assumes a key job in strict customs, transitional experience services , social exercises and social exercises extending from novice karaoke singing to playing during a novice funk band or singing during a network ensemble.

PSYCHOLOGY OF MUSIC PREFERNCE

The brain research of music inclination alludes to the mental factors behind people groups' diverse music inclinations. Music is heard by individuals each day in numerous pieces of the planet, and influences individuals in several ways from feeling guideline to psychological turn of events, alongside giving some way to self-articulation. Music preparing has been perceived to help improve scholarly turn of events and capacity, however no association has been found with regards to how it influences feeling guideline. Various examinations are led to indicate that singular character can affect music inclination, generally utilizing character, however an ongoing meta-investigation has demonstrated that character in itself clarifies little fluctuation in music inclinations. These examinations don't seem to be restricted to American culture, as they need been led with critical outcomes in nations everywhere throughout the planet, including Japan, Germany, and Spain.

LITERATURE REVIEW

Albert Leblanc in An Interactive Theory of Music Preference 1, Journal of Music Therapy(1982) suggested that character qualities can impact a person to be pretty much responsive to various melodic styles just as lead to the impact of music inclination factors related with the social condition. In spite of the fact that the main part of the writing proposed that character is identified with melodic inclinations, convincing explanations about the quality of the relationship are unrealistic, given differential evaluation of both melodic inclination and character qualities.

An early commitment in the estimated connection between character and melodic inclinations was made by Cattell and Anderson (1953) in the improvement of the Institute for Personality and Capacity Testing Musical Preference Test of Personality. The instrument was created to foresee character attributes, in view of the presumption that oblivious needs gain fulfillment through music and that character types ought to incline toward a particular kind of music.

Subjects settled on special decisions dependent on one hundred 30-second differing melodic selections, recently factorized (Cattell and Saunders, 1954) to deliver 11 components or decision designs. Cattell and Anderson related their scores on the 16 Personality Factor

Questionnaire with the Music Preference Test of Personality for both typical and insane subjects. Albeit none of the relationships was enormous enough to show a balanced relationship, the creators announced moderate connections between the 11 music factors and scores on the 16 Personality Factor Questionnaire with ordinary subjects. Contrasted with typical subjects, the creators noted psychotic subjects tended to lean toward generally moderate, basic, and dismal music; sweet songs; and subordinate backup. The special case to this inclination design was the manic group, which favored quick, invigorating, animating music with textural complexity, cadenced variety, and more subtle melodic blueprints.

Daniels (1934) estimated the character attributes of 155 male college first years using the Bernreuter Personality Inventory and related these character attributes to inclination decisions for mainstream or old-style music. Daniels detailed little connection between character characteristics and melodic inclination with a slight propensity for those leaning toward well-known music to be less hypochondriac, less independent, increasingly outgoing, and more predominant than those preferring traditional music.

Deri (1947) examined the connection between the character attributes of performers and inclination for either sentimental or traditional music using the Szondi List of Personality Traits. Deri reasoned that the artists leaning toward traditional music were not so much passionate but rather more intelligent, with a progressively unbending and isolates sense of self, while those leaning toward sentimental music demonstrated more prominent enthusiasm for the outside world, less passionate restriction, and increasingly liquid self-image association.

As opposed to music inclination examines managing group studies, Hahn (1954) examined the connection between a person's character factors and that person's melodic inclinations. Hahn's analysis of past research relating character furthermore, melodic inclinations concentrated on an absence of far reaching character information just as the use of a solitary or spot estimation of melodic inclination. Hahn acquired point by point character information on 12 subjects at a college directing focus by means of projective character instruments and five proportions of melodic inclination for each subject counting: (a) day by day log of melodic tuning in, (b) a melodic inclination stock comprising of 120 melodic extracts, (c) a 48-thing melodic extract test, (d) a melodic foundation poll, and (e) the "desert island" approach in which subjects were approached to rank request five music excerpts they would

wish to take with them to a desert island. Hahn presumed that melodic inclinations are constantly straightforwardly identified with character. All the more explicitly, Hahn inferred that music capacities as a getaway all the more frequently for pulled back people than for cordial people and that melodic inclinations are progressively steady, predictable, and all around characterized among people with more very much incorporated characters than among those with unintegrated characters.

Fisher and Fisher (1951) examined the impacts of individual frailty on inclinations for new music. Individual weakness was estimated by an examination of subject depictions to pictures delineating "loss of control" topics and an assessment of a projective human figure drawing. The melodic inclinations of 97 subjects extending in age from 12 to 18 years were estimated by asking subjects to show an inclination to eight 45-second, matched melodic selections, each pair comprising of an energizing organization and a repressed creation. The specialists utilized new melodic boosts, in light of the suspicion that singular contrasts in character would have more noteworthy chance to impact responses by confining chance for alluding judgment to customary casings of reference related with social job. The agents found that a bigger rate of subjects reacting to new sensational music with either surprising positivity or strange favorableness gave more indications of checked individual frailty than those communicating just a moderate number of inclinations for energizing pieces. The creators presumed that melodic inclinations are not some disconnected tasteful reaction, yet are responses influenced by close to home needs and contrasts like other individual responses.

Fisher and Fisher noted that melodic inclination might be an individual articulation, coming about because of an endeavor to deny and make up for specific feelings of trepidation, nerves, and uncertainties.

Keston and Pinto (1955) related the melodic inclinations of 202 understudies and eight factors: (a) introversion-extroversion, (b) masculineness-femininеness, (c) age, (d) educational level, (e) sex, (f) formal musical education, (g) capacity to perceive melodic structures, and (h) insight. Melodic inclination classifications included: (a) genuine old style, (b) genuine well known traditional, (c) light show determinations, and (d) famous music. The character factors of introversion-extroversion and masculineness-femininеness were evaluated with the Heston Personal Adjustment Inventory. The specialists revealed that

scholarly self-preoccupation, music acknowledgment, and melodic preparing were the most significant components impacting music inclination choices; and insight, sex, age, and masculineness-femininеness were insignificant factors in deciding melodic inclinations.

Payne (1967) tried the theory that individuals with stable dispositions, as estimated by the Maudsley Personality Inventory, would will in general favor "traditional" music (Bach, Vivaldi), and those with psychotic dispositions would more probable incline toward music ordered as "sentimental" (Chopin, Liszt, Tchaikovsky). The old style/sentimental division depended basically on a qualification among structure and feeling rather than music of a particular period. Sentimental music was conceptualized as music in which the enthusiastic component was essential, rather than traditional music in which structure was viewed as additional focal. Payne's example was confined to grown-up and school age people, moderately homogeneous with respect to aural capacity and melodic experience/intrigue, and thought about discriminative, yet not proficient music audience members. Payne announced a positive relationship between the steady/psychotic element of character and the old style/sentimental measurement in music.

Mayeske (1962) researched the relationship of music inclination to character structure using the 16 Personality Factor Inventory and the Objective Analytic Test Battery, on 133 convicts at a corrective organization and 67 undergrads doing brain science courses at the University of Illinois. An investigator developed Music Preference Test, comprising of 84 instrumental selections, filled in as a proportion of melodic inclination. Results were factor-examined to extricate factors associated with inclination. The creator found no character measure indicated a sufficiently high connection with music inclination to prove obvious affiliations, yet detailed that the discoveries recommend that character is engaged with music inclination.

Butler (1968) inspected the intersection of character factors and receptivity to electronic music. Character factors were estimated utilizing the 16 Personality Factor Inventory and receptivity to electronic music was estimated by a specialist created instrument utilizing a 7-point rating scale. The creator revealed critical constructive relationships between's receptivity to electronic music and the Unconventionality and the Radicalism subscales of the 16 Personality Factor Inventory.

Inglefield (1968) researched the relationship of character elements and similarity conduct with melodic inclinations dependent on the suspicion that congruity conduct is a significant factor in the plan and variance of juvenile melodic inclinations. A generally small sample of ninth-grade subjects were chosen on the premise of extraordinary scores on character trial of internal different directedness, autonomy reliance, and requirement for social endorsement, as estimated by the Kassarjian Inner-Other Directedness Scale, the Barron Autonomy Scale, and the Crown-Marlowe Social Desirability Scale. Music inclinations were estimated by an examiner created stock comprising of an assortment of old style, people, jazz, and rock-and roll determinations. Subjects appointed to the exploratory conditions were re-administered the music inclination stock after presentation to diverse social weight circumstances like the Asch (1956) congruity tests. Inglefield found that subjects tended to fit in with recognized companion pioneers by adjusting communicated melodic inclinations, paying little heed to character type, albeit subordinate subjects would in general acclimate more than subjects distinguished as autonomous.

Brim (1978) contemplated the relationship of opinion and restraint sharpening to melodic inclination, utilizing Rokeach's Dogmatism Scale, the Repression-Sensitization Scale, and the Crown-Marlowe Social Desirability Scale. Results demonstrated that opinion indicated a curvilinear relationship with diminished individual variety in melodic inclinations, showing more change in inclination as individuals are increasingly liberal, while suppression was emphatically identified with expanded inclinations.

Bartha (1982) inspected the connection between the self-reported melodic inclinations of 150 alumni understudies at Ohio State College and character factors estimated by the Edwards Personal Inclination Schedule. He announced critical contrasts between music classification bunches on 8 of the EPPS Scales (Achievement, Deference, Exhibition, Autonomy, Surrorance, Change, Endurance, and Heterosexuality).

Blackburn (1983) researched the relationship of self-idea, as estimated by five subscales of the Tennessee Self-Concept Scale (TSCS), to inclination decisions of 97 youths for different styles of music. He detailed that guys showing an inclination for hard rock music scored altogether higher on the Self-Satisfaction subscale of the TSCS than those inclining toward pop, while females preferring pop stone had altogether higher scores on the Total Positive Self Concept and Self-Satisfaction subscales than females leaning toward hard rock. While

the scores on the Tennessee Self-Concept Scale for the non-rock bunch were not measurably thought about as a result of the little number of subjects in this class, the examiner noticed that subjects demonstrating an inclination for traditional music scored well on the TSCS subscales contrasted with other music inclination gatherings.

Robert McCrae and Paul Costa utilized the Eysenck Personality Inventory to build up an much increasingly broad, complex character evaluation. McCrae and Costa set up The Five Factor Model, which they accepted broke down the most significant character qualities in an individual (Schultz and Schultz, 2013). These components incorporate neuroticism, extraversion, transparency, appropriateness, and good faith (will likewise be clarified further on in the paper). These five factors recognize critical parts of the character. The present most noted character test, that is as yet utilized today, is the NEO Personality Inventory; got from the initial three initials of the variables from The Five-Factor Model (Schultz and Schultz, 2013). This investigation shows the appraisal that is utilized for most of my examination, utilizing the character components to associate to the melodic inclinations and the other way around.

SHORT TEST OF MUSIC PREFERENCE (STOMP)

The Short Test of Music Preferences (STOMP) was developed by Rentfrow and Gosling in 2003. It allows researchers to live music preferences. For this survey a revised version of STOMP i.e. STOMP-R was used. There have been 23 genres of music in STOMP- R unlike STOMP which only has 14 genres of music.

These 23 genres have been distributed under MUSIC as follows:

NOTE: Soundtracks/ Theme-songs and Oldies don't load on a single factor. Hence, they aren't counted here.

Figure 4: Dividing MUSIC into genres

These 23 genres were divided into Four groups; intense and rebellious, upbeat and traditional, energetic and rhythmic and reflective and complicated. this can be calculated using the seven point Likert scale where 1 equals to DISLIKE STRONGLY and seven equals to LIKE STRONGLY.

According to STOMP- R, the 23 different music genres can be grouped into four classes which goes as follows:

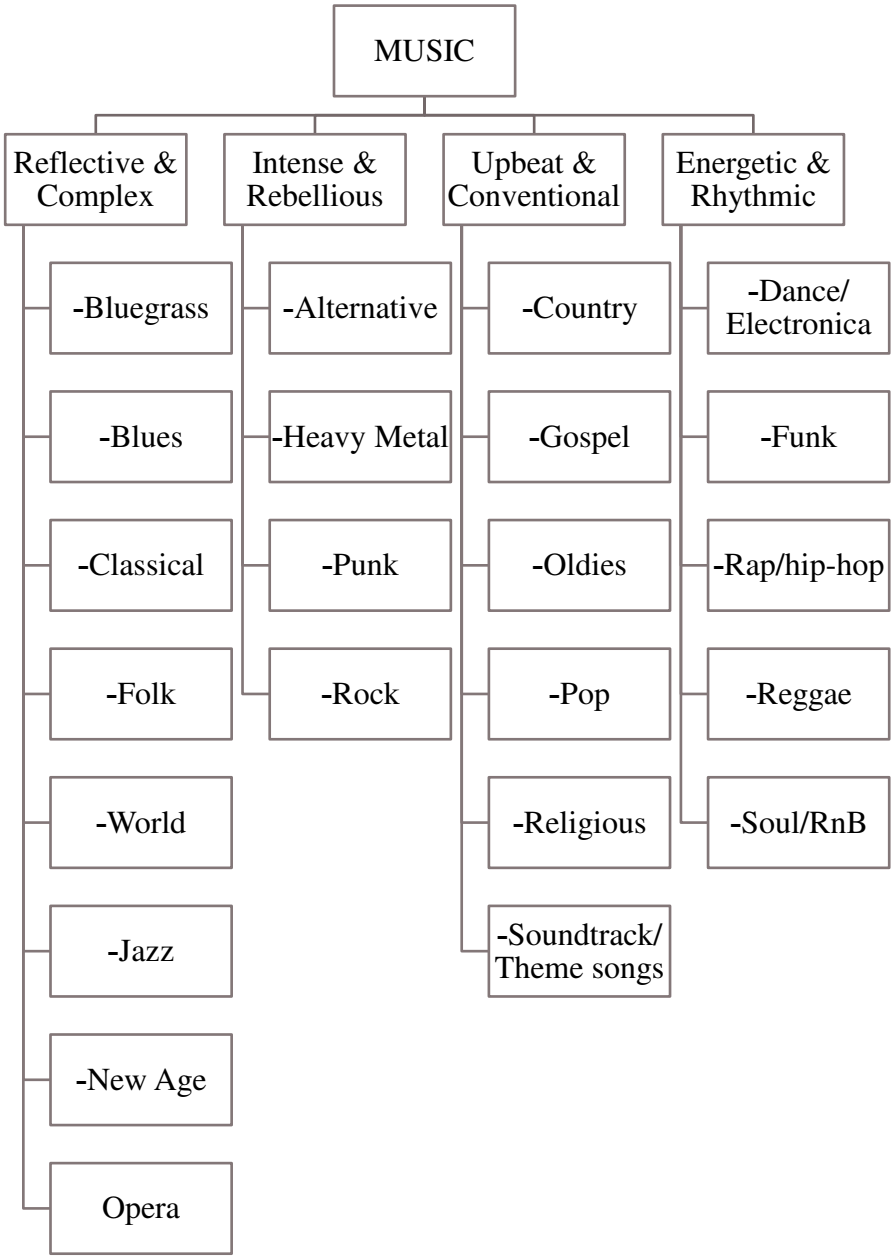

Figure 5: Dividing Music genres based on STOMP-R

THE BIG FIVE INVENTORY

The Big Five Inventory (BFI) was developed by John & Srivastava in 1999. It consisted of 44 items that measure five personality domains. It is a self-report stock intended to quantify the Big Five measurements. It is very concise for a multidimensional character stock (44 things aggregate), and comprises of short expressions with moderately open jargon.Traits of extraversion, agreeableness, emotional stability, conscientiousness and openness to experience are rated on a five point scale where 1 equals to DISAGREE STRONGLY and 5equals to AGREE STRONGLY.

According to the BFI, there are five big dimensions which encompass the different personality characteristics to form different personality types.

Big Five Dimensions	**Facet (and correlated trait adjective)**
Extraversion vs. introversion	Gregariousness (sociable) Assertiveness (forceful) Activity (energetic) Excitement-seeking (adventurous) Positive emotions (enthusiastic) Warmth (outgoing)
Agreeableness vs. antagonism	Trust (forgiving) Straightforwardness (not demanding) Altruism (warm) Compliance (not stubborn) Modesty (not show-off) Tender-mindedness (sympathetic)
Conscientiousness vs. lack of direction	Competence (efficient) Order (organized) Dutifulness (not careless) Achievement striving (thorough) Self-discipline (not lazy) Deliberation (not impulsive)
Neuroticism vs. emotional stability	Anxiety (tense) Angry hostility (irritable) Depression (not contented) Self-consciousness (shy) Impulsiveness (moody) Vulnerability (not self-confident)
Openness vs. closedness to experience	Ideas (curious) Fantasy (imaginative) Aesthetics (artistic) Actions (wide interests) Feelings (excitable) Values (unconventional)

RELATION BETWEEN STOMP AND BFI

Table . Correlations between Big-Five personality factors and music-preference dimensions in Rentfrow and Gosling's (2003) Study 2 sample and in our less-restrictive model

	Rentfrow and Gosling (2003)				Less-restrictive model			
	Intense and rebellious	Reflective and complex	Energetic and rhythmic	Upbeat and conventional	Rock	Elite	Urban	Pop/Dance
Extraversion	.00	.01	.22*	.24*			.18*	.22*
Agreeableness	−.04	.01	.08*	.23*			.11*	.22*
Conscientiousness	−.04	−.02	.00	.15*				.05
Emotional stability	−.01	.08*	.01	−.07		−.16*		
Openness	.18*	.44*	.03	−.14*	.33*	.22*		−.02

Note: $N = 1044$; Blanks represent the parameters that were fixed to zero.
*$p \leq .05$.

Figure 7 : Correlations between Big-Five Personality Factors and Music-Preference Dimensions

(Adapted from source:
https://spark.parkland.edu/cgi/viewcontent.cgi?article=1083&context=ah)

The fundamental understanding of this, with the negative numbers being less connected and the positive numbers being progressively related is:

Exceptional and Rebellious music has a neutral connection to Extraversion; a negative relationship for Agreeableness; a negative connection for Conscientiousness; and a positive relationship for Openness.

Reflective and Complex music shows a positive relationship to Extraversion; a positive connection to Agreeableness; a negative relationship to Conscientiousness; a positive relationship to Emotional Stability; and a solid positive connection for Openness.

Energetic and Rhythmic music depicts a positive connection to Extraversion; a positive connection to Agreeableness; an unbiased relationship to Conscientiousness; a positive relationship to Emotional Stability; and a positive relationship to Openness.

Upbeat and Conventional demonstrate a positive relationship to Extraversion; a positive connection to Agreeableness; a positive connection to Conscientiousness; a negative relationship to Emotional Stability; and a negative connection to Openness.

STUDY DESIGN PLAN

This assessment was created keeping in mind that many populations would not be familiar with the names of the different genres of music. Figure 8 represents the plan of work considered to carry out the study. Everyone who participated in this study consented to have their data collected for this research purpose anonymously.

PREPARATION OF THE QUESTIONNAIRE

A structured questionnaire was prepared using Google forms. The questionnaire (Annexure I) focused on questions framed using guidelines from the revised version of the Short Test of Music Preferences(STOMP) made by Rentfrow & Gosling in 2003 and The Big Five Inventory (BFI) developed by John & Srivastava in 1999. Using the information available online, 1 music excerpt lasting 15 seconds of each music genre was added under the title of each one for the responders to better identify the kind of music they were being questioned about.

AIM OF STUDY

The purpose of this research was to research whether music tastes are linked to personality traits.4 demographic questions, 23 questions regarding music tastes and 45 questions regarding personality traits were asked. The correlation between the answers to those questions helps prove the aim of this study.

INCLUSION CRITERIA

- ➔ Individuals between the ages of 18- 54.
- ➔ Individuals who hear different varieties of music.
- ➔ Individuals settled in United Arab Emirates.

EXCLUSION CRITERIA

- ➔ Individuals who aren't between the specific age group.
- ➔ Individuals who are not exposed to many kinds of music.
- ➔ Individuals who are not settled in United Arab Emirates.

DATA COLLECTION

Using the structured questionnaire, the data required was collected from March to May, 2020. The Google link was circulated among students of different nationalities from different universities residing in the United Arab Emirates and 104 responses were collected successfully including both males and females, 57 and 47 in number respectfully ranging between the age of 18- 54 years.

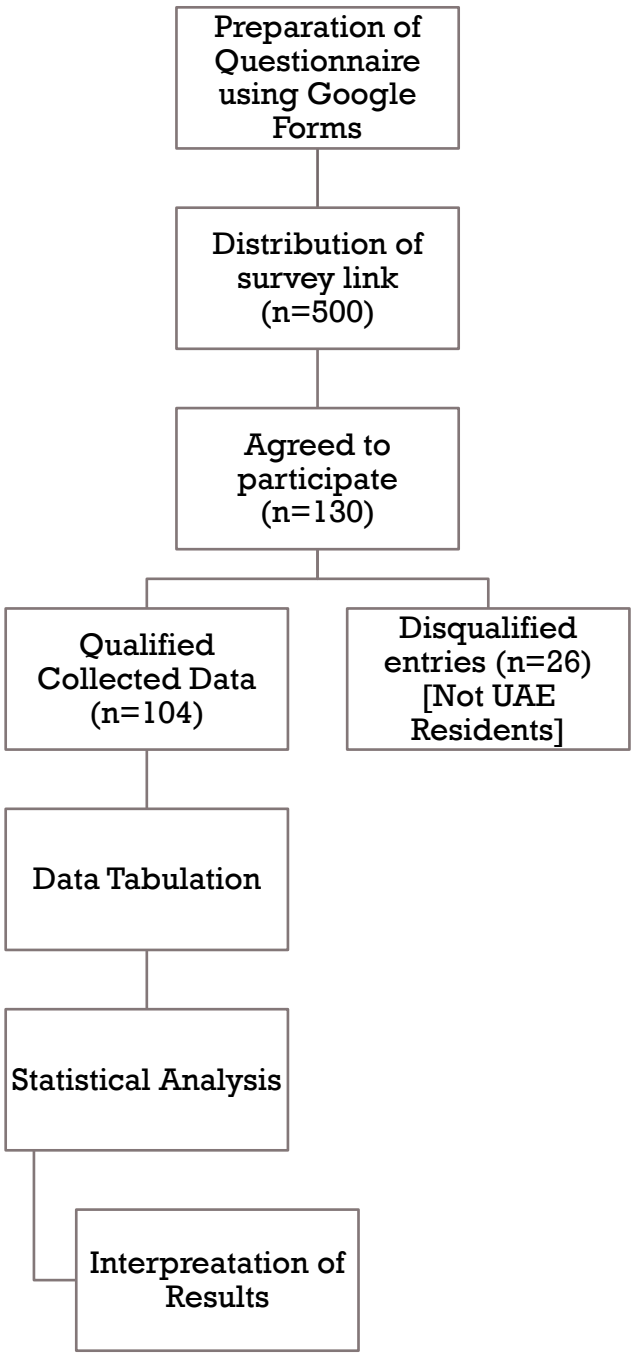

Figure 8: Survey Design

RESULTS

The results from the study has been tabulated into different sections and studied based on their similarities and differences. The responses have been organized into different tables which haven appropriately analyzed and used accordingly in these sections for discussion.

The titles of these sections are as follows:

Section A: DEMOGRAPHIC FEATURES OF STUDY POPULATION

Section B: OVERALL RESPONSE TO THE QUESTIONNAIRE

- **i. MUSIC PREFERENCES**
- **ii. PERSONALITY CHARACTERISTICS**

Section C: EFFECT OF GENDER IN RESPONDING TO THE QUESTIONNAIRE

- **i. MUSIC PREFERENCES**
- **ii. PERSONALITY CHARACTERISTICS**

Section D: EFFECT OF AGE IN RESPONDING TO THE QUESTIONNAIRE

- **i. MUSIC PREFERENCES**
- **ii. PERSONALITY CHARACTERISTICS**

Section E: EFFECT OF LEVEL OF EDUCATION IN RESPONDING TO THE QUESTIONNAIRE

- **i. MUSIC PREFERENCES**
- **ii. PERSONALITY CHARACTERISTICS**

Section F: REPRESENTATION OF DATA IN PIE CHARTS

- **i. DEMOGRAPHIC DATA**
- **ii. MUSIC PREFERENCES**
- **iii. PERSONALITY CHARACTERISTICS**

A. DEMOGRAPHIC FEATURES OF STUDY POPULATION

This section deals with the demographic features of the study population.

In Table 1, the demographic characteristics of the sample population are listed. The study population consisted of 54.8 % males i.e. 57 males and 45.2% i.e. 47 females.

The majority of the sample population(80.8%) consisted of Indians i.e. 84 people, followed by Latino (5.8%) i.e. 6 people; White Caucasian (3.8%) i.e. 4 people; Middle Eastern (2.9%) i.e. 3 people; African, Chinese and Other Asian each consisting of 2 people each, hence each making 1.9% sections. There was also 1 Mixed Nationality sample making up 1% of the sample population.

The sample population consisted of individuals between the ages of 18 - 54 years. They were classified accordingly, the results tabulated, and the data analyzed. It was found that the majority of the sample population (83.7%) i.e. 87 respondents belonged to the age group of 18-24 years old, followed by 11.5% in the age group of 25-34 years old i.e. 12 respondents and 2.9% and 1.9% i.e. 3 respondents and 2 respondents in the age category of 35-44 years old and 45-54 years old category respectively.

Upon categorizing based on their educational qualification it was found that the majority of the sample population(54.8%) i.e. 57 respondents were students who were actively pursuing their Bachelor's degree followed by 26.9% i.e. 28 individuals whose Highest Degree of Qualification was a Bachelor's Degree. This was followed by 10.6% i.e. 11 individuals who had earned a Master's Degree. 3.8% of the sample population i.e. 4 respondents were High School graduates while 2.9% of the population i.e. 3 individuals had completed some college but weren't awarded a degree. 1% of the sample population i.e. 1 single individual had undergone Technical Training only.

The data revealed a significant difference among all demographic groups, when analysed statistically which can be related to unequal distribution of the population in each sub groups.

We have used the Chi-square goodness of fit test to analyze this tabulated data. Chi-square goodness of fit test is used when the expected value and observed value of a specific

parameter are significantly different from one another. In this test, the term Goodness of fit can be used to compare the observed values with the expected proportion. This is used to compare how empirical and theoretical distribution fits together.

To carry out the test, the data is separated into intervals and entered as Observed Frequency. The total sample size is divided by the total numbers of intervals in a category and entered as the Expected Frequency. Expected Proportion refers to the percentual proportion expected if the sample size had been 100.

Degree of Freedom(df) can be calculated by deducting 1 from the total number of intervals while the p-value which is the probability of observing an example measurement as extreme as the test measurement, can be computed using the chi-square and df values.

TABLE 1: DEMOGRAPHIC FEATURES OF STUDY POPULATION

Feature		Number	Percentage	P*	chi-square	df
Total Number of Participants	104					
Gender	Male	57	54.8	0.3771	0.78	1
	Female	47	45.2			
Age	18-24 years old	87	83.7	<.0001	193.15	3
	25-34 years old	12	11.5			
	35-44 years old	3	2.9			
	45-54 years old	2	1.9			
Level of Education	High school graduate	4	3.8	<.0001	137.15	5
	Currently in college	57	54.8			
	Completed some college, no degree	3	2.9			
	Technical Training	1	1			
	Bachelor's Degree	28	26.9			
	Master's Degree	11	10.6			
Primary Cultural or Racial Identification (Ethnicity)	African	2	1.9	<.0001	442.4	7
	Chinese	2	1.9			
	Indian	84	80.8			
	Latino	6	5.8			
	Middle Eastern	3	2.9			
	Mixed	1	1

B. OVERALL RESPONSE TO THE QUESTIONNAIRE:

i. MUSIC PREFERENCES

This section deals with the overall responses received for the first part of the Questionnaire which deals with the Music Preferences of the different individuals.

In Table 2, the level of preference of each music genre by the different individuals out of the collected samples is given. The responses have been categorized based on the genre and the level of preferences ranging in ascending order from 1 to 7 where 1 refers to DISLIKE STRONGLY, 2 refers to DISLIKE MODERATELY, 3 refers to DISLIKE A LITTLE, 4 refers to NEITHER LIKE NOR DISLIKE, 5 refers to LIKE A LITTLE, 6 refers to LIKE MODERATELY and 7 refers to LIKE STRONGLY.

The first genre in consideration is Alternative. The majority of the sample population(28.8%) i.e. 30 individuals chose preference level 6 (Like moderately), followed by 26% i.e. 27 individuals chose preference level 5 (Like a little) while 18.3% i.e. 19 individuals chose preference level 4 (Neither like nor dislike) and 17.3% i.e. 18 individuals who choose preference level 7 (Like strongly). Also, 7.7% i.e. 8 individuals chose preference level 3 (Dislike a little) while 1% i.e. 1 individual chose preference level 2 (Dislike moderately) and 1% i.e. 1 individual chose preference level 1 (Dislike strongly).

The second genre in consideration is Bluegrass. The majority of the sample population(23.1%) i.e. 24 individuals chose preference level 5 (Like a little), followed by 20.2% i.e. 21 individuals chose preference level 4 (Neither like nor dislike) while 16.3% i.e. 17 individuals chose preference level 3 (Dislike a little) and 14.4% i.e. 15 individuals who choose preference level 6 (Like moderately). Also, 12.5% i.e. 13 individuals chose preference level 2 (Dislike moderately) while 7.7% i.e. 8 individuals chose preference level 1 (Dislike strongly) and 5.8% i.e. 6 individuals chose preference level 7 (Like strongly).

The third genre in consideration is Blues. The majority of the sample population(34.6%) i.e. 36 individuals chose preference level 6 (Like moderately), followed by 21.2% i.e. 22 individuals chose preference level 5 (Like a little) while 20.2% i.e. 21 individuals chose preference level 4 (Neither like nor dislike) and 13.4% i.e. 14 individuals who choose preference level 7 (Like strongly). Also, 4.8% i.e. 5 individuals chose preference level 3

(Dislike a little) while 3.8% i.e. 4 individuals chose preference level 2 (Dislike moderately) and 1.9% i.e. 2 individuals chose preference level 1 (Dislike strongly).

The fourth genre in consideration is Classical. There are 22 individuals i.e. 21.2% of the total sample population who have the preference level of 7 (Like strongly) as well as 22 individuals i.e. 21.2% of the total sample population who have the preference level of 5 (Like a little). This is followed by 20 individuals i.e. 19.2% of the total sample population who have the preference level of 6 (Like moderately) as well as 20 individuals i.e. 19.2% of the total sample population who have the preference level of 4 (Neither like nor dislike). Also, 8.7% i.e. 9 individuals chose preference level 1 (Dislike strongly) while 5.8% i.e. 6 individuals chose preference level 3 (Dislike a little) and 4.8% i.e. 5 individuals chose preference level 2 (Dislike moderately).

The fifth genre in consideration is Country. The majority of the sample population (23.1%) i.e. 24 individuals chose preference level 6 (Like moderately), followed by 20.2% i.e. 21 individuals chose preference level 5 (Like a little) while 18.3% i.e. 19 individuals chose preference level 7 (Like strongly) and 16.3% i.e. 17 individuals who chose preference level 4 (Neither like nor dislike). Also, 9.6% i.e. 10 individuals chose preference level 3 (Dislike a little) while 6.7% i.e. 7 individuals chose preference level 1 (Dislike strongly) and 5.8% i.e. 6 individuals chose preference level 2 (Dislike moderately).

The sixth genre in consideration is Dance/ Electronica. The majority of the sample population(26%) i.e. 27 individuals chose preference level 6 (Like moderately), followed by 23.1% i.e. 24 individuals chose preference level 7 (Like strongly) while 19.2% i.e. 20 individuals chose preference level 5 (Like a little) and 17.3% i.e. 18 individuals who chose preference level 4 (Neither like nor dislike). Also, 7.7% i.e. 8 individuals chose preference level 3 (Dislike a little) while 4.8% i.e. 5 individuals chose preference level 1 (Dislike strongly) and 1.9% i.e. 2 individuals chose preference level 2 (Dislike moderately).

The seventh genre in consideration is Folk. The majority of the sample population (26.9%) i.e. 28 individuals chose preference level 4 (Neither like nor dislike), followed by 19.2% i.e. 20 individuals chose preference level 5 (Like a little) while 13.5% i.e. 14 individuals chose preference level 6 (Like moderately) and 12.5% i.e. 13 individuals who chose preference level 1 (Dislike strongly). Also, 10.6% i.e. 11 individuals chose preference level 3 (Dislike a

little) while 9.6% i.e. 10 individuals chose preference level 2 (Dislike moderately) and 7.7% i.e. 8 individuals chose preference level 7 (Like strongly).

The eighth genre in consideration is Funk. The majority of the sample population (26%) i.e. 27 individuals chose preference level 5 (Like a little), followed by 20.2% i.e. 21 individuals chose preference level 4 (Neither like nor dislike) while 14.4% i.e. 15 individuals chose preference level 6 (Like moderately) and 11.5% i.e. 12 individuals who chose preference level 3 (Dislike a little). Also, 10.6% i.e. 11 individuals chose preference level 2 (Dislike moderately) while 8.7% i.e. 9 individuals chose preference level 1 (Dislike strongly) and 8.7% i.e. 9 individuals chose preference level 7 (Like strongly).

The ninth genre in consideration is Gospel. The majority of the sample population (26%) i.e. 27 individuals chose preference level 5 (Like a little), followed by 24% i.e. 25 individuals chose preference level 4 (Neither like nor dislike) while 13.5% i.e. 14 individuals chose preference level 6 (Like moderately) and 13.5% i.e. 14 individuals chose preference level 7 (Like strongly). Also, 10.6% i.e. 11 individuals chose preference level 3 (Dislike a little) while 7.7% i.e. 8 individuals chose preference level 1 (Dislike strongly) and 4.8% i.e. 5 individuals chose preference level 2 (Dislike moderately).

The tenth genre in consideration is Heavy Metal. The majority of the sample population (23.1%) i.e. 24 individuals chose preference level 1(Dislike strongly), followed by 16.3% i.e. 17 individuals chose preference level 4 (Neither like nor dislike) while 15.4% i.e. 16 individuals chose preference level 2 (Dislike moderately) and 14.4% i.e. 15 individuals who chose preference level 3 (Dislike a little). Also, 13.5% i.e. 14 individuals chose preference level 5 (Like a little)while 8.7% i.e. 9 individuals chose preference level 6 (Like moderately) and 8.7% i.e. 9 individuals chose preference level 7 (Like strongly).

The eleventh genre in consideration is World Music. The majority of the sample population (26.9%) i.e. 28 individuals chose preference level 4 (Neither like nor dislike), followed by 19.2% i.e. 20 individuals chose preference level 3 (Dislike a little) while 13.5% i.e. 14 individuals chose preference level 5 (Like a little) and 12.5% i.e. 13 individuals who chose preference level 6 (Like moderately). Also, 10.6% i.e. 11 individuals chose preference level 1 (Dislike strongly) while 9.6% i.e. 10 individuals chose preference level 7 (Like strongly) and 7.7% i.e. 8 individuals chose preference level 2 (Dislike moderately).

The twelfth genre in consideration is Jazz. There are 26 individuals i.e. 25% of the total sample population who have the preference level of 4 (Neither like nor dislike) as well as 26 individuals i.e. 25% of the total sample population who have the preference level of 6 (Like moderately). This is followed by 22 individuals i.e. 21.2% of the total sample population who have the preference level of 5 (Like a little) as well as 17 individuals i.e. 16.3% of the total sample population who have the preference level of 7 (Like strongly). Also, 4.8% i.e. 5 individuals chose preference level 1 (Dislike strongly) while 4.8% i.e. 5 individuals chose preference level 3 (Dislike a little) and 2.9% i.e. 3 individuals chose preference level 2 (Dislike moderately).

The thirteenth genre in consideration is New Age. The majority of the sample population (26%) i.e. 25 individuals chose preference level 4 (Neither like nor dislike), followed by 23.1% i.e. 24 individuals chose preference level 5 (Like a little) while 18.3% i.e. 19 individuals chose preference level 6 (Like moderately) and 13.5% i.e. 14 individuals who chose preference level 7 (Like strongly). Also, 9.6% i.e. 10 individuals chose preference level 3 (Dislike a little) while 5.8% i.e. 6 individuals chose preference level 1 (Dislike strongly) and 4.8% i.e. 5 individuals chose preference level 2 (Dislike moderately).

The fourteenth genre in consideration is Oldies. The majority of the sample population (21.2%) i.e. 22 individuals chose preference level 4 (Neither like nor dislike), followed by 19.2% i.e. 20 individuals chose preference level 5 (Like a little) while 17.3% i.e. 18 individuals chose preference level 6 (Like moderately) and 14.4% i.e. 15 individuals who chose preference level 7 (Like strongly). Also, 11.5% i.e. 13 individuals chose preference level 3 (Dislike a little) while 8.7% i.e. 9 individuals chose preference level 2 (Dislike moderately) and 7.7% i.e. 8 individuals chose preference level 1 (Dislike strongly).

The fifteenth genre in consideration is Opera. The majority of the sample population (28.8%) i.e. 30 individuals chose preference level 1 (Dislike strongly), followed by 21.2% i.e. 22 individuals chose preference level 4 (Neither like nor dislike) while 13.5% i.e. 14 individuals chose preference level 3 (Dislike a little) and 12.5% i.e. 13 individuals who chose preference level 5 (Like a little). Also, 12.5% i.e. 13 individuals chose preference level 6 (Like moderately) while 5.8% i.e. 6 individuals chose preference level 2 (Dislike moderately) and 5.8% i.e. 6 individuals chose preference level 7 (Like strongly).

The sixteenth genre in consideration is Pop. The majority of the sample population (35.6%) i.e. 37 individuals chose preference level 6 (Like moderately), followed by 29.8% i.e. 31 individuals chose preference level 7 (Like strongly) while 20.2% i.e. 21 individuals chose preference level 5 (Like a little) and 3.8% i.e. 4 individuals who chose preference level 2 (Dislike moderately). Also, 3.8% i.e. 4 individuals chose preference level 3 (Dislike a little) while 3.8% i.e. 4 individuals chose preference level 4 (Neither like nor dislike) and 2.9% i.e. 3 individuals chose preference level 1 (Dislike strongly).

The seventeenth genre in consideration is Punk. The majority of the sample population (31.7%) i.e. 33 individuals chose preference level 6 (Like moderately), followed by 26.9% i.e. 28 individuals chose preference level 5 (Like a little) while 10.6% i.e. 11 individuals chose preference level 2 (Dislike moderately) and 9.6% i.e. 10 individuals who chose preference level 4 (Neither like nor dislike). Also, 7.7% i.e. 8 individuals chose preference level 3 (Dislike a little) while 6.7% i.e. 7 individuals chose preference level 1 (Dislike strongly) and 6.7% i.e. 7 individuals chose preference level 7 (Like strongly).

The eighteenth genre in consideration is Rap/Hip-Hop. The majority of the sample population (26.9%) i.e. 28 individuals chose preference level 7 (Like strongly), followed by 22.1% i.e. 23 individuals chose preference level 6 (Like moderately) while 15.4% i.e. 16 individuals chose preference level 5 (Like a little) and 12.5% i.e. 13 individuals who chose preference level 4 (Neither like nor dislike). Also, 10.6% i.e. 11 individuals chose preference level 3 (Dislike a little) while 6.7% i.e. 7 individuals chose preference level 1 (Dislike strongly) and 5.8% i.e. 6 individuals chose preference level 2 (Dislike moderately).

The nineteenth genre in consideration is Reggae. There are 24 individuals i.e. 23.1% of the total sample population who have the preference level of 4 (Neither like nor dislike) as well as 24 individuals i.e. 23.1% of the total sample population who have the preference level of 5 (Like a little). This is followed by 23 individuals i.e. 22.1% of the total sample population who have the preference level of 6 (Like moderately) as well as 13 individuals i.e. 12.5% of the total sample population who have the preference level of 7 (Like strongly). Also, 10.6% i.e. 11 individuals chose preference level 3 (Dislike a little) while 4.8% i.e. 5 individuals chose preference level 2 (Dislike moderately) and 3.8% i.e. 4 individuals chose preference level 1 (Dislike strongly).

The twentieth genre in consideration is Religious. The majority of the sample population (26%) i.e. 25 individuals chose preference level 4 (Neither like nor dislike), followed by 18.3% i.e. 19 individuals chose preference level 7 (Like strongly) while 17.3% i.e. 18 individuals chose preference level 6 (Like moderately) and 11.5% i.e. 12 individuals who chose preference level 5 (Like a little). Also, 10.6% i.e. 11 individuals chose preference level 1 (Dislike strongly) while 10.6% i.e. 11 individuals chose preference level 3 (Dislike a little) and 6.7% i.e. 7 individuals chose preference level 2 (Dislike moderately).

The nineteenth genre in consideration is Rock. There are 23 individuals i.e. 22.1% of the total sample population who have the preference level of 6 (Like moderately) as well as 23 individuals i.e. 22.1% of the total sample population who have the preference level of 7 (Like strongly). This is followed by 21 individuals i.e. 20.2% of the total sample population who have the preference level of 4 (Neither like nor dislike) as well as 21 individuals i.e. 20.2% of the total sample population who have the preference level of 5 (Like a little). Also, 6.7% i.e. 7 individuals chose preference level 2 (Dislike moderately) while 4.8% i.e. 5 individuals chose preference level 1 (Dislike strongly) and 3.8% i.e. 4 individuals chose preference level 3 (Dislike a little).

The twenty-second genre in consideration is Soul/ RnB. The majority of the sample population (26.9%) i.e. 28 individuals chose preference level 7 (Like strongly), followed by 23.1% i.e. 24 individuals chose preference level 5 (Like a little) while 22.1% i.e. 23 individuals chose preference level 6 (Like moderately) and 16.3% i.e. 17 individuals who chose preference level 4 (Neither like nor dislike). Also, 5.8% i.e. 6 individuals chose preference level 3 (Dislike a little) while 4.8% i.e. 5 individuals chose preference level 2 (Dislike moderately) and 1% i.e. 1 individual chose preference level 1 (Dislike strongly).

The twenty-third genre in consideration is Soundtracks/ Theme songs. The majority of the sample population (34.6%) i.e. 36 individuals chose preference level 6 (Like moderately) followed by 30.8% i.e. 32 individuals chose preference level 7 (Like strongly) while 20.2% i.e. 21 individuals chose preference level 5 (Like a little) and 13.5% i.e. 14 individuals who chose preference level 4 (Neither like nor dislike). Also, 1% i.e. 1 individual chose preference level 3 (Dislike a little) while preference level 2 (Dislike moderately) and 1 (Dislike strongly) was not chosen by anyone.

We have used the Chi-square goodness of fit test to analyze this tabulated data. Chi-square goodness of fit test is used when the expected value and observed value of a specific parameter are significantly different from one another. In this test, the term Goodness of fit can be used to compare the observed values with the expected proportion. This is used to compare how empirical and theoretical distribution fits together.

To carry out the test, the data is separated into intervals and entered as Observed Frequency. The total sample size is divided by the total numbers of intervals in a category and entered as the Expected Frequency. Expected Proportion refers to the percentual proportion expected if the sample size had been 100.

Degree of Freedom(df) can be calculated by deducting 1 from the total number of intervals while the p-value which is the probability of observing an example measurement as extreme as the test measurement, can be computed using the chi-square and df values.

TABLE 2: OVERALL RESPONSE TO QUESTIONNAIRE IN MUSIC PREFERENCES

Question	Responses	No of responses	Percentages	P*	chi-square	df
What is your level of preference for each of these music types						
Alternative	1 = Dislike strongly	1	1	<.0001	56.19	6
	2 = Dislike moderately	1	1			
	3 = Dislike a little	8	7.7			
	4 = Neither like nor dislike	19	18.3			
	5 = Like a little	27	26			
	6 = Like moderately	30	28.8			
	7 = Like strongly	18	17.3			
Bluegrass	1 = Dislike strongly	8	7.7	0.0087	17.15	6

ii. PERSONALITY CHARACTERISTICS

This section deals with the overall responses received for the second part of the Questionnaire which deals with the different personality traits of the individuals.

In Table 3, the level of agreement to each trait being a characteristic that the different individuals out of the collected samples could identify with is given. The questionnaire began with a title that said, “I SEE MYSELF AS SOMEONE WHO”, which acted as the sentence to be considered when checking the personality traits asked about.

The responses have been categorized based on the personality characteristic trait and the level of agreement of identification ranging in ascending order from 1 to 5 where 1 refers to DISAGREE STRONGLY, 2 refers to DISAGREE A LITTLE, 3 refers to NEITHER AGREE NOR DISAGREE, 4 refers to AGREE A LITTLE and refers to AGREE STRONGLY.

The first trait in consideration is “IS TALKATIVE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 10 i.e. 9.6% and the ones who chose agreeability level 2 (Disagree a little) are 15 i.e. 14.4%. 23 respondents i.e. 22.1% chose neutral agreeability level 3 (Neither agree nor disagree). 41 respondents i.e. 39.4% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 15 respondents i.e. 14.4% chose the maximum agreeability level 5 (Agree strongly).

The second trait in consideration is “TENDS TO FIND FAULT WITH OTHERS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 21 i.e. 20.2% and the ones who chose agreeability level 2 (Disagree a little) are 23 i.e. 22.1%. 27 respondents i.e. 26% chose neutral agreeability level 3 (Neither agree nor disagree) making it the highest chosen response. 25 respondents i.e. 24% chose agreeability level 4 (Agree a little). Finally, 8 respondents i.e. 7.7% chose the maximum agreeability level 5 (Agree strongly).

The third trait in consideration is “DOES A THOROUGH JOB”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 2 i.e. 1.6% and the ones who chose agreeability level 2 (Disagree a little) are 5 i.e. 4.8%. 26 respondents i.e. 25% chose neutral agreeability level 3 (Neither agree nor disagree). 42 respondents i.e. 40.4% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 29 respondents i.e. 27.9% chose the maximum agreeability level 5 (Agree strongly).

The fourth trait in consideration is “IS DEPRESSED, BLUE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 27 i.e. 26% and the ones who chose agreeability level 2 (Disagree a little) are 20 i.e. 19.2%. 23 respondents i.e. 22.1% chose neutral agreeability level 3 (Neither agree nor disagree). 27 respondents i.e. 26% chose agreeability level 4 (Agree a little) . Finally, 7 respondents i.e. 6.7% chose the maximum agreeability level 5 (Agree strongly). Agreeability level 1 (Disagree Strongly) and agreeability level 4 (Agree a little) were both the maximum chosen level at 26%.

The fifth trait in consideration is “IS ORIGINAL, COMES UP WITH NEW IDEAS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) is 1 i.e. 1% and the ones who chose agreeability level 2 (Disagree a little) are 8 i.e. 7.7%. 23 respondents i.e. 22.1% chose neutral agreeability level 3 (Neither agree nor disagree). 44 respondents i.e. 42.3% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 28 respondents i.e. 26.9% chose the maximum agreeability level 5 (Agree strongly).

The sixth trait in consideration is “IS RESERVED”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 14 i.e. 13.5% and the ones who chose agreeability

level 2 (Disagree a little) are also 14 i.e. 13.5%. 22 respondents i.e. 21.2% chose neutral agreeability level 3 (Neither agree nor disagree). 35 respondents i.e. 33.7% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 19 respondents i.e. 18.3% chose the maximum agreeability level 5 (Agree strongly).

The seventh trait in consideration is “HAS FEW ARTISTIC INTERESTS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 8 i.e. 7.7% and the ones who chose agreeability level 2 (Disagree a little) are 12 i.e. 11.5%. 15 respondents i.e. 14.4% chose neutral agreeability level 3 (Neither agree nor disagree). 42 respondents i.e. 40.4% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 27 respondents i.e. 26% chose the maximum agreeability level 5 (Agree strongly).

The eighth trait in consideration is “IS HELPFUL AND UNSELFISH WITH OTHERS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 3 i.e. 2.9% and the ones who chose agreeability level 2 (Disagree a little) are 4 i.e. 3.8%. 19 respondents i.e. 18.3% chose neutral agreeability level 3 (Neither agree nor disagree). 40 respondents i.e. 38.5% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 38 respondents i.e. 36.5% chose the maximum agreeability level 5 (Agree strongly).

The ninth trait in consideration is “CAN BE SOMEWHAT CARELESS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 6 i.e. 5.8% and the ones who chose agreeability level 2 (Disagree a little) are 7 i.e. 6.7%. 24 respondents i.e. 23.1% chose neutral agreeability level 3 (Neither agree nor disagree). 51 respondents i.e. 49% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 16 respondents i.e. 15.4% chose the maximum agreeability level 5 (Agree strongly).

The tenth trait in consideration is “IS RELAXED, HANDLES STRESS WELL”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 8 i.e. 7.7% and the ones who chose agreeability level 2 (Disagree a little) are 16 i.e. 15.4%. 28 respondents i.e. 26.9% chose neutral agreeability level 3 (Neither agree nor disagree). 31 respondents i.e.

29.8% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 21 respondents i.e. 20.2% chose the maximum agreeability level 5 (Agree strongly).

The eleventh trait in consideration is “IS CURIOUS ABOUT MANY DIFFERENT THINGS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 3 i.e. 2.6% and the one who chose agreeability level 2 (Disagree a little) is 1 i.e. 1%. 13 respondents i.e. 12.5% chose neutral agreeability level 3 (Neither agree nor disagree). 35 respondents i.e. 33.7% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 52 respondents i.e. 50% chose the maximum agreeability level 5 (Agree strongly) making it the highest chosen response.

The twelfth trait in consideration is “IS FULL OF ENERGY”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 3 i.e. 2.9% and the ones who chose agreeability level 2 (Disagree a little) are 11 i.e. 10.6%. 33 respondents i.e. 31.7% chose neutral agreeability level 3 (Neither agree nor disagree). 29 respondents i.e. 27.9% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 28 respondents i.e. 26.9% chose the maximum agreeability level 5 (Agree strongly).

The thirteenth trait in consideration is “STARTS QUARRELS WITH OTHERS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 31 i.e. 29.8% making it the highest chosen response and the ones who chose agreeability level 2 (Disagree a little) are 17 i.e. 16.3%. 30 respondents i.e. 28.8% chose neutral agreeability level 3 (Neither agree nor disagree). 13 respondents i.e. 12.5% chose agreeability level 4 (Agree a little). Finally, 13 respondents i.e. 12.5% chose the maximum agreeability level 5 (Agree strongly).

The fourteenth trait in consideration is “IS A RELIABLE WORKER”. The number of respondents who chose agreeability level 1 (Disagree Strongly) is 1 i.e. 1% and the ones who chose agreeability level 2 (Disagree a little) are 2 i.e. 1.9%. 15 respondents i.e. 14.4% chose neutral agreeability level 3 (Neither agree nor disagree). 43 respondents i.e. 41.3% chose

agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 43 respondents i.e. 41.3% chose the maximum agreeability level 5 (Agree strongly).

The fifteenth trait in consideration is “CAN BE TENSE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 7 i.e. 6.7% and the ones who chose agreeability level 2 (Disagree a little) are 15 i.e. 14.4%. 18 respondents i.e. 17.3% chose neutral agreeability level 3 (Neither agree nor disagree). 50 respondents i.e. 48.1% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 14 respondents i.e. 13.5% chose the maximum agreeability level 5 (Agree strongly).

The sixteenth trait in consideration is “IS INGENIOUS, A DEEP THINKER”. The number of respondents who chose agreeability level 1 (Disagree Strongly) is 1 i.e. 1% and the ones who chose agreeability level 2 (Disagree a little) are 8 i.e. 7.7%. 22 respondents i.e. 21.2% chose neutral agreeability level 3 (Neither agree nor disagree). 33 respondents i.e. 31.7% chose agreeability level 4 (Agree a little). Finally, 43 respondents i.e. 41.3% chose the maximum agreeability level 5 (Agree strongly) making it the highest chosen response.

The seventeenth trait in consideration is “GENERATES A LOT OF ENTHUSIASM”. ”. The number of respondents who chose agreeability level 1 (Disagree Strongly) is 1 i.e. 1% and the ones who chose agreeability level 2 (Disagree a little) are 8 i.e. 7.7%. 30 respondents i.e. 28.8% chose neutral agreeability level 3 (Neither agree nor disagree). 38 respondents i.e. 36.5% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 27 respondents i.e. 26% chose the maximum agreeability level 5 (Agree strongly).

The eighteenth trait in consideration is “LIKES TO COOPERATE WITH OTHERS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) is 3 i.e. 2.9% and the ones who chose agreeability level 2 (Disagree a little) are 6 i.e. 5.8%. 16 respondents i.e. 15.4% chose neutral agreeability level 3 (Neither agree nor disagree). 41 respondents i.e. 39.4% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 38 respondents i.e. 36.5% chose the maximum agreeability level 5 (Agree strongly).

The nineteenth trait in consideration is “HAS A FORGIVING NATURE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 7 i.e. 6.7% and the ones who chose agreeability level 2 (Disagree a little) are 9 i.e. 8.7%. 14 respondents i.e. 13.5% chose neutral agreeability level 3 (Neither agree nor disagree). 31 respondents i.e. 29.8% chose agreeability level 4 (Agree a little). Finally, 43 respondents i.e. 41.3% chose the maximum agreeability level 5 (Agree strongly) making it the highest chosen response.

The twentieth trait in consideration is “IS EASILY DISTRACTED”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 3 i.e. 2.9% and the ones who chose agreeability level 2 (Disagree a little) are 12 i.e. 11.5%. 21 respondents i.e. 20.2% chose neutral agreeability level 3 (Neither agree nor disagree). 39 respondents i.e. 37.5% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 29 respondents i.e. 27.9% chose the maximum agreeability level 5 (Agree strongly).

The twenty-first trait in consideration is “TENDS TO BE DISORGANIZED”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 14 i.e. 13.5% and the ones who chose agreeability level 2 (Disagree a little) are 17 i.e. 16.3%. 25 respondents i.e. 24% chose neutral agreeability level 3 (Neither agree nor disagree). 33 respondents i.e. 31.7% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 15 respondents i.e. 14.4% chose the maximum agreeability level 5 (Agree strongly).

The twenty-second trait in consideration is “WORRIES A LOT”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 10 i.e. 9.6% and the ones who chose agreeability level 2 (Disagree a little) are 9 i.e. 8.7%. 21 respondents i.e. 20.2% chose neutral agreeability level 3 (Neither agree nor disagree). 32 respondents i.e. 30.8% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 32 respondents i.e. 30.8% chose the maximum agreeability level 5 (Agree strongly) making them both the highest chosen response

The twenty-third trait in consideration is “HAS AN ACTIVE IMAGINATION”. The number of respondents who chose agreeability level 1 (Disagree Strongly) is 1 i.e. 1% and the ones who chose agreeability level 2 (Disagree a little) are 2 i.e. 1.9%. 16respondents i.e. 15.4% chose neutral agreeability level 3 (Neither agree nor disagree). 31 respondents i.e. 29.8% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 54 respondents i.e. 51.9% chose the maximum agreeability level 5 (Agree strongly) making it the highest chosen response.

The twenty-fourth trait in consideration is “TENDS TO BE QUIET”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 7 i.e. 6.7% and the ones who chose agreeability level 2 (Disagree a little) are 14 i.e. 13.5%. 22 respondents i.e. 21.2% chose neutral agreeability level 3 (Neither agree nor disagree). 37 respondents i.e. 35.6% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 24 respondents i.e. 23.1% chose the maximum agreeability level 5 (Agree strongly).

The twenty-fifth trait in consideration is “IS GENERALLY TRUSTING”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 7 i.e. 6.7% and the ones who chose agreeability level 2 (Disagree a little) are 12 i.e. 11.5%. 13 respondents i.e. 12.5% chose neutral agreeability level 3 (Neither agree nor disagree). 30 respondents i.e. 28.8% chose agreeability level 4 (Agree a little). Finally, 42 respondents i.e. 40.4% chose the maximum agreeability level 5 (Agree strongly) making it the highest chosen response.

The twenty-sixth trait in consideration is “TENDS TO BE LAZY”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 6 i.e. 5.8% and the ones who chose agreeability level 2 (Disagree a little) are 7 i.e. 6.7%. 19 respondents i.e. 18.3% chose neutral agreeability level 3 (Neither agree nor disagree). 36 respondents i.e. 34.6% chose agreeability level 4 (Agree a little). Finally, 36 respondents i.e. 34.6% chose the maximum agreeability level 5 (Agree strongly) making them both the highest chosen response.

The twenty-seventh trait in consideration is “IS EMOTIONALLY STABLE, NOT EASILY UPSET”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 5 i.e. 4.8% and the ones who chose agreeability level 2 (Disagree a little) are 13 i.e. 12.5%. 34 respondents i.e. 32.7% chose neutral agreeability level 3 (Neither agree nor disagree) making it the highest chosen response. 33 respondents i.e. 31.7% chose agreeability level 4 (Agree a little). Finally, 19 respondents i.e. 18.3% chose the maximum agreeability level 5 (Agree strongly).

The twenty-eighth trait in consideration is “IS INVENTIVE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 2 i.e. 1.9% and the ones who chose agreeability level 2 (Disagree a little) are 7 i.e. 6.7%. 35 respondents i.e. 33.7% chose neutral agreeability level 3 (Neither agree nor disagree). 36 respondents i.e. 34.6% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 24 respondents i.e. 23.1% chose the maximum agreeability level 5 (Agree strongly).

The twenty-ninth trait in consideration is “HAS AN ASSERTIVE PERSONALITY”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 4 i.e. 3.8% and the ones who chose agreeability level 2 (Disagree a little) are 7 i.e. 6.7%. 35 respondents i.e. 33.7% chose neutral agreeability level 3 (Neither agree nor disagree). 40 respondents i.e. 38.5% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 18 respondents i.e. 17.3% chose the maximum agreeability level 5 (Agree strongly).

The thirtieth trait in consideration is “CAN BE COLD AND ALOOF”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 10 i.e. 9.6% and the ones who chose agreeability level 2 (Disagree a little) are 19 i.e. 18.3%. 26 respondents i.e. 25% chose neutral agreeability level 3 (Neither agree nor disagree). 28 respondents i.e. 26.9% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 21 respondents i.e. 20.2% chose the maximum agreeability level 5 (Agree strongly).

The thirty-first trait in consideration is “PERSEVERES UNTIL THE TASK IS FINISHED”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 2 i.e. 1.9% and the ones who chose agreeability level 2 (Disagree a little) are 9 i.e. 8.7%. 21 respondents i.e. 20.2% chose neutral agreeability level 3 (Neither agree nor disagree). 44 respondents i.e. 42.3% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 28 respondents i.e. 26.9% chose the maximum agreeability level 5 (Agree strongly).

The thirty-second trait in consideration is “CAN BE MOODY”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 6 i.e. 5.8% and the ones who chose agreeability level 2 (Disagree a little) are 7 i.e. 6.7%. 19 respondents i.e. 18.3% chose neutral agreeability level 3 (Neither agree nor disagree). 48 respondents i.e. 46.2% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 24 respondents i.e. 23.1% chose the maximum agreeability level 5 (Agree strongly).

The thirty-third trait in consideration is “VALUES ARTISTIC, AESTHETIC EXPERIENCES”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 3 i.e. 2.9% and the ones who chose agreeability level 2 (Disagree a little) are 3 i.e. 2.9%. 13 respondents i.e. 12.5% chose neutral agreeability level 3 (Neither agree nor disagree). 35 respondents i.e. 33.7% chose agreeability level 4 (Agree a little). Finally, 50 respondents i.e. 48.1% chose the maximum agreeability level 5 (Agree strongly) making it the highest chosen response.

The thirty-fourth trait in consideration is “IS SOMETIMES SHY, INHIBITED”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 10 i.e. 9.6% and the ones who chose agreeability level 2 (Disagree a little) are 14 i.e. 13.5%. 18 respondents i.e. 17.3% chose neutral agreeability level 3 (Neither agree nor disagree). 46 respondents i.e. 44.2% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 16 respondents i.e. 15.4% chose the maximum agreeability level 5 (Agree strongly).

The thirty-fifth trait in consideration is “IS CONSIDERATE AND KIND TO ALMOST EVERYONE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 2 i.e. 1.9% and the ones who chose agreeability level 2 (Disagree a little) are 6 i.e. 5.8%. 18 respondents i.e. 17.3% chose neutral agreeability level 3 (Neither agree nor disagree). 39 respondents i.e. 37.5% chose agreeability level 4 (Agree a little). Finally, 39 respondents i.e. 37.5% chose the maximum agreeability level 5 (Agree strongly) making them both the highest chosen response.

.

The thirty-sixth trait in consideration is “DOES THINGS EFFICIENTLY”. The number of respondents who chose agreeability level 1 (Disagree Strongly) is 1 i.e. 1% and the ones who chose agreeability level 2 (Disagree a little) are 5 i.e. 4.8%. 27 respondents i.e. 26% chose neutral agreeability level 3 (Neither agree nor disagree). 38 respondents i.e. 36.5% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 33 respondents i.e. 31.7% chose the maximum agreeability level 5 (Agree strongly).

The thirty-seventh trait in consideration is “REMAINS CALM IN TENSE SITUATIONS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 4 i.e. 3.8% and the ones who chose agreeability level 2 (Disagree a little) are 11 i.e. 10.6%. 29 respondents i.e. 27.9% chose neutral agreeability level 3 (Neither agree nor disagree). 35 respondents i.e. 33.7% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 25 respondents i.e. 24% chose the maximum agreeability level 5 (Agree strongly).

The thirty-eighth trait in consideration is “PREFERS WORK THAT IS ROUTINE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 8 i.e. 7.7% and the ones who chose agreeability level 2 (Disagree a little) are 14 i.e. 13.5%. 28 respondents i.e. 26.9% chose neutral agreeability level 3 (Neither agree nor disagree). 32 respondents i.e. 30.8% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 22 respondents i.e. 21.2% chose the maximum agreeability level 5 (Agree strongly).

The thirty-ninth trait in consideration is “IS OUTGOING, SOCIABLE”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 10 i.e. 9.6% and the ones who chose agreeability level 2 (Disagree a little) are 16 i.e. 15.4%. 28 respondents i.e. 26.9% chose neutral agreeability level 3 (Neither agree nor disagree). 31 respondents i.e. 29.8% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 21 respondents i.e. 20.2% chose the maximum agreeability level 5 (Agree strongly).

The fortieth trait in consideration is “IS SOMETIMES RUDE TO OTHERS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 16 i.e. 15.4% and the ones who chose agreeability level 2 (Disagree a little) are 16 i.e. 15.4%. 20 respondents i.e. 19.2% chose neutral agreeability level 3 (Neither agree nor disagree). 35 respondents i.e. 33.7% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 17 respondents i.e. 16.3% chose the maximum agreeability level 5 (Agree strongly).

The forty-first trait in consideration is “MAKES PLANS AND FOLLOWS THROUGH WITH THEM”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 5 i.e. 4.8% and the ones who chose agreeability level 2 (Disagree a little) are 12 i.e. 11.5%. 22 respondents i.e. 21.2% chose neutral agreeability level 3 (Neither agree nor disagree). 41 respondents i.e. 39.4% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 24 respondents i.e. 23.1% chose the maximum agreeability level 5 (Agree strongly).

The forty-second trait in consideration is “GETS NERVOUS EASILY”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 12 i.e. 11.5% and the ones who chose agreeability level 2 (Disagree a little) are 11 i.e. 10.6%. 26 respondents i.e. 25% chose neutral agreeability level 3 (Neither agree nor disagree). 45 respondents i.e. 44.3% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 9 respondents i.e. 10.6% chose the maximum agreeability level 5 (Agree strongly).

The forty-third trait in consideration is “LIKES TO REFLECT, PLAY WITH IDEAS”. The number of respondents who chose agreeability level 1 (Disagree Strongly) are 2 i.e. 1.9% and the ones who chose agreeability level 2 (Disagree a little) are 3 i.e. 2.9%. 22 respondents i.e.

21.2% chose neutral agreeability level 3 (Neither agree nor disagree). 50 respondents i.e. 48.1% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 27 respondents i.e. 26% chose the maximum agreeability level 5 (Agree strongly).

The forty-fourth trait in consideration is "IS SOPHISTICATED IN ART, MUSIC, OR LITERATURE". The number of respondents who chose agreeability level 1 (Disagree Strongly) are 7 i.e. 6.7% and the ones who chose agreeability level 2 (Disagree a little) are 10 i.e. 9.6%. 24 respondents i.e. 23.1% chose neutral agreeability level 3 (Neither agree nor disagree). 36 respondents i.e. 34.6% chose agreeability level 4 (Agree a little) making it the highest chosen response. Finally, 27 respondents i.e. 26% chose the maximum agreeability level 5 (Agree strongly).

We have used the Chi-square goodness of fit test to analyze this tabulated data. Chi-square goodness of fit test is used when the expected value and observed value of a specific parameter are significantly different from one another. In this test, the term Goodness of fit can be used to compare the observed values with the expected proportion. This is used to compare how empirical and theoretical distribution fits together.

To carry out the test, the data is separated into intervals and entered as Observed Frequency. The total sample size is divided by the total numbers of intervals in a category and entered as the Expected Frequency. Expected Proportion refers to the percentual proportion expected if the sample size had been 100.

Degree of Freedom(df) can be calculated by deducting 1 from the total number of intervals while the p-value which is the probability of observing an example measurement as extreme as the test measurement, can be computed using the chi-square and df values.

TABLE 3: OVERALL RESPONSE TO QUESTIONNAIRE IN PERSONALITY CHARACTERISTICS

To what level are the following statements applicable to you? I SEE MYSELF AS SOMEONE WHO

Question	Responses	No of responses	Percentages	P*	chi-square	df
Is relaxed, handles stress well	1 = Disagree strongly	8	7.7	0.0024	16.48	4
	2 = Disagree a little	16	15.4			
	3 = Neither agree nor disagree	28	26.9			
	4 = Agree a little	31	29.8			
	5= Agree strongly	21	20.2			
Is talkative	1 = Disagree strongly	3	2.9	<.0001	28.69	4
	2 = Disagree a little	1	1			
	3 = Neither agree nor disagree	13	12.5			
	4 = Agree a little	35	33.7			
	5= Agree strongly	52	50			
Tends to find fault with others	1 = Disagree strongly	3	2.9	0.0288	10.81	4
	2 = Disagree a little	11	10.6			
	3 = Neither agree nor disagree	33	31.7			
	4 = Agree a little	29	27.9			
	5= Agree strongly	28	26.9			
Does a thorough job	1 = Disagree strongly	31	29.8	<.0001	55.13	4
	2 = Disagree a little	17	16.3			
	3 = Neither agree nor disagree	30	28.8	0.0036	15.62	4
	4 = Agree a little	13	12.5			
	5= Agree strongly	13	12.5			
Is depressed, blue	1 = Disagree strongly	1	1	0.0107	13.12	4
	2 = Disagree a little	2	1.9

C. EFFECT OF GENDER IN RESPONDING TO THE QUESTIONNAIRE:

i. MUSIC PREFERENCES:

In this section, the responses to music preferences have been sorted out by the genders. Preference level 5 (LIKE A LITTLE), Preference level 6 (LIKE MODERATELY) and Preference level 7 (LIKE STRONGLY) have been counted i.e. the sums of preference level 5, 6 and 7 in each genre has been tabulated below. Neither refers to the difference between the total sample population and the total number of individuals from both genders who preferred to listen to that particular genre of music.

The first genre in consideration is Alternative. This is preferred in various levels by a total of 41 males and 34 females.

The second genre in consideration is Bluegrass. This is preferred in various levels by a total of 18 males and 27 females.

The third genre in consideration is Blues. This is preferred in various levels by a total of 39 males and 33 females.

The fourth genre in consideration is Classical. This is preferred in various levels by a total of 34 males and 30 females.

The fifth genre in consideration is Country. This is preferred in various levels by a total of 34 males and 30 females.

The sixth genre in consideration is Dance/ Electronica. This is preferred in various levels by a total of 39 males and 32 females.

The seventh genre in consideration is Folk. This is preferred in various levels by a total of 17 males and 25 females.

The eighth genre in consideration is Funk. This is preferred in various levels by a total of 29 males and 22 females.

The ninth genre in consideration is Gospel. This is preferred in various levels by a total of 30 males and 25 females.

The tenth genre in consideration is Heavy Metal. This is preferred in various levels by a total of 20 males and 12 females.

The eleventh genre in consideration is World Music. This is preferred in various levels by a total of 35 males and 24 females.

The twelfth genre in consideration is Jazz. This is preferred in various levels by a total of 41 males and 24 females.

The thirteenth genre in consideration is New Age. This is preferred in various levels by a total of 36 males and 21 females.

The fourteenth genre in consideration is Oldies. This is preferred in various levels by a total of 33 males and 20 females.

The fifteenth genre in consideration is Opera. This is preferred in various levels by a total of 14 males and 18 females.

The sixteenth genre in consideration is Pop. This is preferred in various levels by a total of 47 males and 42 females.

The seventeenth genre in consideration is Punk. This is preferred in various levels by a total of 34 males and 34 females.

The eighteenth genre in consideration is Rap/Hip-hop. This is preferred in various levels by a total of 43 males and 24 females.

The nineteenth genre in consideration is Reggae. This is preferred in various levels by a total of 36 males and 24 females.

The twentieth genre in consideration is Religious. This is preferred in various levels by a total of 24 males and 25 females.

The twenty- first genre in consideration is Rock. This is preferred in various levels by a total of 38 males and 29 females.

The twenty- second genre in consideration is Soul/RnB. This is preferred in various levels by a total of 42 males and 33 females.

The twenty- third genre in consideration is Soundtracks/ Theme song. This is preferred in various levels by a total of 50 males and 39 females.

The Chi-square test of independence is used in the analysis of this data because there is no relation between the values in this data as males and females are independent of one another.

TABLE 4: EFFECT OF GENDER IN SELECTING MUSIC TYPES

MUSIC TYPES	Male	Female	Neither	P*	Chi-square

ii. PERSONALITY CHARACTERISTICS

In this section, the responses to personality traits have been sorted out by the genders. Agreement level 4 (AGREE A LITTLE), and Agreement level 5 (AGREE STRONGLY) have been counted i.e. the sums of Agreement level 4 and 5 in each trait has been tabulated below. Neither refers to the difference between the total sample population and the total number of individuals from both genders who agree to that particular trait being applied to them.

The first trait in consideration is “IS TALKATIVE”. This is positively agreed by 29 males and 27 females.

The second trait in consideration is “TENDS TO FIND FAULT WITH OTHERS”. This is positively agreed by 23 males and 10 females.

The third trait in consideration is “DOES A THOROUGH JOB”. This is positively agreed by 40 males and 31 females.

The fourth trait in consideration is “IS DEPRESSED, BLUE”. This is positively agreed by 21 males and 13 females.

The fifth trait in consideration is “IS ORIGINAL, COMES UP WITH NEW IDEAS”. This is positively agreed by 37 males and 35 females.

The sixth trait in consideration is “IS RESERVED”. This is positively agreed by 27 males and 27 females.

The seventh trait in consideration is “IS HELPFUL AND UNSELFISH WITH OTHERS”. This is positively agreed by 38 males and 40 females.

The eighth trait in consideration is “CAN BE SOMEWHAT CARELESS”. This is positively agreed by 38 males and 29 females.

The ninth trait in consideration is “IS RELAXED, HANDLES STRESS WELL”. This is positively agreed by 27 males and 25 females.

The tenth trait in consideration is “IS CURIOUS ABOUT MANY DIFFERENT THINGS”. This is positively agreed by 46 males and 41females.

The eleventh trait in consideration is “IS FULL OF ENERGY”. This is positively agreed by 26 males and 31 females.

The twelfth trait in consideration is “STARTS QUARRELS WITH OTHERS”. This is positively agreed by 16 males and 10 females.

The thirteenth trait in consideration is “IS A RELIABLE WORKER”. This is positively agreed by 43 males and 43 females.

The fourteenth trait in consideration is “CAN BE TENSE”. This is positively agreed by 35 males and 29 females.

The fifteenth trait in consideration is “IS INGENIOUS, A DEEP THINKER”. This is positively agreed by 41 males and 35 females.

The sixteenth trait in consideration is “GENERATES A LOT OF ENTHUSIASM.” This is positively agreed by 36 males and 29 females.

The seventh trait in consideration is “HAS A FORGIVING NATURE”. This is positively agreed by 37 males and 37 females.

The eighteenth trait in consideration is “TENDS TO BE DISORGANIZED”. This is positively agreed by 27 males and 21 females.

The nineteenth trait in consideration is “WORRIES A LOT”. This is positively agreed by 40 males and 24 females.

The twentieth trait in consideration is “HAS AN ACTIVE IMAGINATION”. This is positively agreed by 44 males and 41 females.

The twenty-first trait in consideration is “TENDS TO BE QUIET”. This is positively agreed by 36 males and 25 females.

The twenty-second trait in consideration is “IS GENERALLY TRUSTING”. This is positively agreed by 36 males and 36 females.

The twenty-third trait in consideration is “TENDS TO BE LAZY”. This is positively agreed by 40 males and 32 females.

The twenty-fourth trait in consideration is “IS EMOTIONALLY STABLE, NOT EASILY UPSET.” This is positively agreed by 25 males and 27 females.
The twenty-fifth trait in consideration is “IS INVENTIVE”. This is positively agreed by 31 males and 29 females.

The twenty-sixth trait in consideration is “HAS AN ASSERTIVE PERSONALITY”. This is positively agreed by 29 males and 27 females.

The twenty seventh consideration is “CAN BE COLD AND ALOOF”. This is positively agreed by 29 males and 27 females.

The twenty-eighth trait in consideration is “PERSEVERES UNTIL THE TASK IS FINISHED”. This is positively agreed by 27 males and 31 females.

The twenty-ninth trait in consideration is “CAN BE MOODY”. This is positively agreed by 37 males and 35 females.

The thirtieth trait in consideration is “VALUES ARTISTIC, AESTHETIC EXPERIENCES”. This is positively agreed by 45 males and 40 females.

The thirty-first trait in consideration is “IS SOMETIMES SHY, INHIBITED”. This is positively agreed by 34 males and 28 females.

The thirty-second trait in consideration is “IS CONSIDERATE AND KIND TO ALMOST EVERYONE”. This is positively agreed by 39 males and 39 females.

The thirty-third trait in consideration is “DOES THINGS EFFICIENTLY”. This is positively agreed by 37 males and 34 females.

The thirty-fourth trait in consideration is “REMAINS CALM IN TENSE SITUATIONS”. This is positively agreed by 34 males and 26 females.

The thirty-fifth trait in consideration is “PREFERS WORK THAT IS ROUTINE”. This is positively agreed by 34 males and 20 females.

The thirty-sixth trait in consideration is “IS OUTGOING, SOCIABLE”. This is positively agreed by 35 males and 27 females.

The thirty-seventh in consideration is “IS SOMETIMES RUDE TO OTHERS”. This is positively agreed by 34 males and 18 females.

The thirty-eighth trait in consideration is “MAKES PLANS AND FOLLOWS THROUGH WITH THEM”. This is positively agreed by 42 males and 23 females.

The thirty-ninth trait in consideration is “GETS NERVOUS EASILY”. This is positively agreed by 31 males and 24 females.

The fortieth trait in consideration is “LIKES TO REFLECT, PLAY WITH IDEAS”. This is positively agreed by 44 males and 33 females.

The forty-first trait in consideration is “HAS FEW ARTISTIC INTERESTS”. This is positively agreed by 35 males and 34 females.

The forty-second trait in consideration is “LIKES TO COOPERATE WITH OTHERS”. This is positively agreed by 42 males and 37 females.

The forty-third trait in consideration is “IS EASILY DISTRACTED”. This is positively agreed by 39 males and 29 females.

The forty-fourth trait in consideration is “IS SOPHISTICATED IN ART, MUSIC, OR LITERATURE”. This is positively agreed by 31 males and 32 females.

The Chi-square test of independence is used in the analysis of this data because there is no relation between the values in this data as males and females are independent of one another.

D. EFFECT OF AGE IN RESPONDING TO THE QUESTIONNAIRE:

i. MUSIC PREFERENCES

In this section, the responses to music preferences have been sorted out by the different age groups of the individuals. Preference level 5 (LIKE A LITTLE), Preference level 6 (LIKE MODERATELY) and Preference level 7 (LIKE STRONGLY) have been counted i.e. the sums of preference level 5, 6 and 7 in each genre has been tabulated below.

The first genre in consideration is Alternative. This is preferred in various levels by 64 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The second genre in consideration is Bluegrass. This is preferred in various levels by 35 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The third genre in consideration is Blues. This is preferred in various levels by 62 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The fourth genre in consideration is Classical. This is preferred in various levels by 54 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The fifth genre in consideration is Country. This is preferred in various levels by 54 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The sixth genre in consideration is Dance/ Electronica. This is preferred in various levels by 61 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The seventh genre in consideration is Folk. This is preferred in various levels by 32 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The eighth genre in consideration is Funk. This is preferred in various levels by 41 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The ninth genre in consideration is Gospel. This is preferred in various levels by 45 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The tenth genre in consideration is Heavy Metal. This is preferred in various levels by 23 respondents belonging to the age group of 18-24 years old, 7 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The eleventh genre in consideration is World Music. This is preferred in various levels by 49 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twelfth genre in consideration is Jazz. This is preferred in various levels by 55 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the

age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirteenth genre in consideration is New Age. This is preferred in various levels by 47 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The fourteenth genre in consideration is Oldies. This is preferred in various levels by 43 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The fifteenth genre in consideration is Opera. This is preferred in various levels by 22 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The sixteenth genre in consideration is Pop. This is preferred in various levels by 58 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and 1 respondent belonging to the age group of 45-54 years old.

The seventeenth genre in consideration is Punk. This is preferred in various levels by 58 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The eighteenth genre in consideration is Rap/Hip-hop. This is preferred in various levels by 57 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The nineteenth genre in consideration is Reggae. This is preferred in various levels by 50 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twentieth genre in consideration is Religious. This is preferred in various levels by 39 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty- first genre in consideration is Rock. This is preferred in various levels by 57 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty- second genre in consideration is Soul/RnB. This is preferred in various levels by 65 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty- third genre in consideration is Soundtracks/ Theme song. This is preferred in various levels by 75 respondents belonging to the age group of 18-24 years old, 11 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and 1 respondent belonging to the age group of 45-54 years old.

The Chi-square test of independence is used in the analysis of this data because there is no relation between the values in this data as the age groups of the respondents are independent of one another.

old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The eighth trait in consideration is “CAN BE SOMEWHAT CARELESS”. This is positively agreed upon by 57 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The ninth trait in consideration is “IS RELAXED, HANDLES STRESS WELL”. This is positively agreed upon by 42 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The tenth trait in consideration is “IS CURIOUS ABOUT MANY DIFFERENT THINGS”. This is positively agreed upon by 76 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The eleventh trait in consideration is “IS FULL OF ENERGY”. This is positively agreed upon by 47 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twelfth trait in consideration is “STARTS QUARRELS WITH OTHERS”. This is positively agreed upon by 17 respondents belonging to the age group of 18-24 years old, 7 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the

age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirteenth trait in consideration is “IS A RELIABLE WORKER”. This is positively agreed upon by 74 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The fourteenth trait in consideration is “CAN BE TENSE”. This is positively agreed upon by 54 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The fifteenth trait in consideration is “IS INGENIOUS, A DEEP THINKER”. This is positively agreed upon by 65 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The sixteenth trait in consideration is “GENERATES A LOT OF ENTHUSIASM” This is positively agreed upon by 55 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The seventh trait in consideration is “HAS A FORGIVING NATURE”. This is positively agreed upon by 63 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The eighteenth trait in consideration is “TENDS TO BE DISORGANIZED”. This is positively agreed upon by 38 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The nineteenth trait in consideration is “WORRIES A LOT”. This is positively agreed upon by 54 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twentieth trait in consideration is “HAS AN ACTIVE IMAGINATION”. This is positively agreed upon by 74 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-first trait in consideration is “TENDS TO BE QUIET”. This is positively agreed upon by 51 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-second trait in consideration is “IS GENERALLY TRUSTING”. This is positively agreed upon by 61 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-third trait in consideration is “TENDS TO BE LAZY”. This is positively agreed upon by 62 respondents belonging to the age group of 18-24 years old, 8 respondents

belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-fourth trait in consideration is “IS EMOTIONALLY STABLE, NOT EASILY UPSET.” This is positively agreed upon by 42 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-fifth trait in consideration is “IS INVENTIVE”. This is positively agreed upon by 50 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-sixth trait in consideration is “HAS AN ASSERTIVE PERSONALITY”. This is positively agreed upon by 48 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty seventh consideration is “CAN BE COLD AND ALOOF”. This is positively agreed upon by 39 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-eighth trait in consideration is “PERSEVERES UNTIL THE TASK IS FINISHED”. This is positively agreed upon by 62 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents

belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The twenty-ninth trait in consideration is “CAN BE MOODY”. This is positively agreed upon by 61 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirtieth trait in consideration is “VALUES ARTISTIC, AESTHETIC EXPERIENCES”. This is positively agreed upon by 52 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-first trait in consideration is “IS SOMETIMES SHY, INHIBITED”. This is positively agreed upon by 67 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-second trait in consideration is “IS CONSIDERATE AND KIND TO ALMOST EVERYONE”. This is positively agreed upon by 61 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-third trait in consideration is “DOES THINGS EFFICIENTLY”. This is positively agreed upon by 50 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-fourth trait in consideration is “REMAINS CALM IN TENSE SITUATIONS”. This is positively agreed upon by 46 respondents belonging to the age group of 18-24 years

old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-fifth trait in consideration is “PREFERS WORK THAT IS ROUTINE”. This is positively agreed upon by 44 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-sixth trait in consideration is “IS OUTGOING, SOCIABLE”. This is positively agreed upon by 52 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-seventh in consideration is “IS SOMETIMES RUDE TO OTHERS”. This is positively agreed upon by 42 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-eighth trait in consideration is “MAKES PLANS AND FOLLOWS THROUGH WITH THEM”. This is positively agreed upon by 55 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The thirty-ninth trait in consideration is “GETS NERVOUS EASILY”. This is positively agreed upon by 45 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The fortieth trait in consideration is “LIKES TO REFLECT, PLAY WITH IDEAS”. This is positively agreed upon by 67 respondents belonging to the age group of 18-24 years old, 8

respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The forty-first trait in consideration is “HAS FEW ARTISTIC INTERESTS”. This is positively agreed upon by 59 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The forty-second trait in consideration is “LIKES TO COOPERATE WITH OTHERS”. This is positively agreed upon by 68 respondents belonging to the age group of 18-24 years old, 9 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The forty-third trait in consideration is “IS EASILY DISTRACTED”. This is positively agreed upon by 58 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The forty-fourth trait in consideration is “IS SOPHISTICATED IN ART, MUSIC, OR LITERATURE”. This is positively agreed upon by 53 respondents belonging to the age group of 18-24 years old, 8 respondents belonging to the age group of 25-34 years old, 2 respondents belonging to the age group of 35-44 years old and no respondents belonging to the age group of 45-54 years old.

The Chi-square test of independence is used in the analysis of this data because there is no relation between the values in this data as the age groups of the respondents are independent of one another.

Technical Training, 17 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The fourth genre in consideration is Classical. This is preferred in various levels by 3 respondents who are high school graduates, 36 respondents who are students, 1 respondent who are completed some college but have no degree, none of the respondents who underwent Technical Training, 15 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The fifth genre in consideration is Country. This is preferred in various levels by 3 respondents who are high school graduates, 36 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 15 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The sixth genre in consideration is Dance/ Electronica. This is preferred in various levels by 3 respondents who are high school graduates, 41 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 17 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The seventh genre in consideration is Folk. This is preferred in various levels by 1 respondent who is a high school graduate, 20 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The eighth genre in consideration is Funk. This is preferred in various levels by 2 respondents who are high school graduates, 25 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The ninth genre in consideration is Gospel. This is preferred in various levels by 2 respondents who are high school graduates, 29 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The tenth genre in consideration is Heavy Metal. This is preferred in various levels by 1 respondent who is high school graduate, 12 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 10 respondents with a Bachelor's Degree and 8 respondents with a Master's Degree.

The eleventh genre in consideration is World Music. This is preferred in various levels by 2 respondents who are high school graduates, 33 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twelfth genre in consideration is Jazz. This is preferred in various levels by 3 respondents who are high school graduates, 37 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 15 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The thirteenth genre in consideration is New Age. This is preferred in various levels by 2 respondents who are high school graduates, 31 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The fourteenth genre in consideration is Oldies. This is preferred in various levels by 2 respondents who are high school graduates, 27 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent

Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The fifteenth genre in consideration is Opera. This is preferred in various levels by 1 respondents who is a high school graduate, 12 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 10 respondents with a Bachelor's Degree and 8 respondents with a Master's Degree.

The sixteenth genre in consideration is Pop. This is preferred in various levels by 4 respondents who are high school graduates, 50 respondents who are students, 3 respondents who completed some college but have no degree, none of the respondents who underwent Technical Training, 22 respondents with a Bachelor's Degree and 10 respondents with a Master's Degree.

The seventeenth genre in consideration is Punk. This is preferred in various levels by 3 respondents who are high school graduates, 39 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 16 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The eighteenth genre in consideration is Rap/Hip-hop. This is preferred in various levels by 3 respondents who are high school graduates, 38 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 16 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The nineteenth genre in consideration is Reggae. This is preferred in various levels by 3 respondents who are high school graduates, 33 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twentieth genre in consideration is Religious. This is preferred in various levels by 2 respondents who are high school graduates, 24 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 13 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twenty- first genre in consideration is Rock. This is preferred in various levels by 3 respondents who are high school graduates, 38 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 16 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twenty- second genre in consideration is Soul/RnB. This is preferred in various levels by 4 respondents who are high school graduates, 42 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 16 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twenty- third genre in consideration is Soundtracks/ Theme song. This is preferred in various levels by 4 respondents who are high school graduates, 48 respondents who are students, 3 respondents who completed some college but have no degree, none of the respondents who underwent Technical Training, 16 respondents with a Bachelor's Degree and 10 respondents with a Master's Degree.

The Chi-square test of independence is used in the analysis of this data because there is no relation between the values in this data as the age groups of the respondents are independent of one another.

*$p<0.05$ level of significance, Chi-square test of independence

ii. PERSONALITY CHARACTERISTICS

In this section, the responses to personality traits have been sorted out by the level of education of the respondents. Agreement level 4 (AGREE A LITTLE), and Agreement level 5 (AGREE STRONGLY) have been counted i.e. the sums of Agreement level 4 and 5 in each trait has been tabulated below.

The first trait in consideration is "IS TALKATIVE". This is preferred in various levels by 2 respondents who are high school graduates, 29 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 15 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The second trait in consideration is "TENDS TO FIND FAULT WITH OTHERS". This is preferred in various levels by 1 respondent who is a high school graduate, 12 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 11 respondents with a Bachelor's Degree and 8 respondents with a Master's Degree.

The third trait in consideration is "DOES A THOROUGH JOB". This is preferred in various levels by 3 respondents who are high school graduates, 41 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 17 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The fourth trait in consideration is "IS DEPRESSED, BLUE". This is preferred in various levels by 1 respondents who are high school graduates, 13 respondents who are students, 1 respondent who completed some college but have no degree, 1respondent who underwent Technical Training, 11 respondents with a Bachelor's Degree and 8 respondents with a Master's Degree.

The fifth trait in consideration is "IS ORIGINAL, COMES UP WITH NEW IDEAS". This is preferred in various levels by 3 respondents who are high school graduates, 41 respondents

who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 18 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The sixth trait in consideration is "IS RESERVED". This is preferred in various levels by 2 respondents who are high school graduates, 27 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 15 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The seventh trait in consideration is "IS HELPFUL AND UNSELFISH WITH OTHERS". This is preferred in various levels by 4 respondents who are high school graduates, 42 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 21 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The eighth trait in consideration is "CAN BE SOMEWHAT CARELESS". This is preferred in various levels by 3 respondents who are high school graduates, 38 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 16 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The ninth trait in consideration is "IS RELAXED, HANDLES STRESS WELL". This is preferred in various levels by 2 respondents who are high school graduates, 26 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The tenth trait in consideration is "IS CURIOUS ABOUT MANY DIFFERENT THINGS". This is preferred in various levels by 4 respondents who are high school graduates, 48 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 22 respondents with a Bachelor's Degree and 10 respondents with a Master's Degree.

The eleventh trait in consideration is “IS FULL OF ENERGY”. This is preferred in various levels by 2 respondents who are high school graduates, 31 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 14 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The twelfth trait in consideration is “STARTS QUARRELS WITH OTHERS”. This is preferred in various levels by 1 respondent who is a high school graduate, 7 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 9 respondents with a Bachelor’s Degree and 8 respondents with a Master’s Degree.

The thirteenth trait in consideration is “IS A RELIABLE WORKER”. This is preferred in various levels by 4 respondents who are high school graduates, 47 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 21 respondents with a Bachelor’s Degree and 10 respondents with a Master’s Degree.

The fourteenth trait in consideration is “CAN BE TENSE”. This is preferred in various levels by 3 respondents who are high school graduates, 36 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 15 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The fifteenth trait in consideration is “IS INGENIOUS, A DEEP THINKER”. This is preferred in various levels by 4 respondents who are high school graduates, 42 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 20 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The sixteenth trait in consideration is “GENERATES A LOT OF ENTHUSIASM.” This is preferred in various levels by 3 respondents who are high school graduates, 37 respondents who are students, 1 respondent who completed some college but have no degree, 1

respondent who underwent Technical Training, 15 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The seventh trait in consideration is "HAS A FORGIVING NATURE". This is preferred in various levels by 3 respondents who are high school graduates, 42 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 19 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The eighteenth trait in consideration is "TENDS TO BE DISORGANIZED". This is preferred in various levels by 2 respondents who are high school graduates, 23 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 13 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The nineteenth trait in consideration is "WORRIES A LOT". This is preferred in various levels by 3 respondents who are high school graduates, 36 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 15 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twentieth trait in consideration is "HAS AN ACTIVE IMAGINATION". This is preferred in various levels by 4 respondents who are high school graduates, 47 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 21 respondents with a Bachelor's Degree and 10 respondents with a Master's Degree.

The twenty-first trait in consideration is "TENDS TO BE QUIET". This is preferred in various levels by 3 respondents who are high school graduates, 34 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twenty-second trait in consideration is “IS GENERALLY TRUSTING”. This is preferred in various levels by 3 respondents who are high school graduates, 41 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 18 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The twenty-third trait in consideration is “TENDS TO BE LAZY”. This is preferred in various levels by 3 respondents who are high school graduates, 42 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 17 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The twenty-fourth trait in consideration is “IS EMOTIONALLY STABLE, NOT EASILY UPSET.”. This is preferred in various levels by 2 respondents who are high school graduates, 25 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 15 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The twenty-fifth trait in consideration is “IS INVENTIVE”. This is preferred in various levels by 3 respondents who are high school graduates, 33 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 14 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The twenty-sixth trait in consideration is “HAS AN ASSERTIVE PERSONALITY”. This is preferred in various levels by 2 respondents who are high school graduates, 32 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The twenty seventh consideration is “CAN BE COLD AND ALOOF”. This is preferred in various levels by 2 respondents who are high school graduates, 24 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who

underwent Technical Training, 13 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twenty-eighth trait in consideration is "PERSEVERES UNTIL THE TASK IS FINISHED". This is preferred in various levels by 3 respondents who are high school graduates, 41 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 18 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The twenty-ninth trait in consideration is "CAN BE MOODY". This is preferred in various levels by 3 respondents who are high school graduates, 41 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 18 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The thirtieth trait in consideration is "VALUES ARTISTIC, AESTHETIC EXPERIENCES". This is preferred in various levels by 4 respondents who are high school graduates, 47 respondents who are students, 3 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 21 respondents with a Bachelor's Degree and 10 respondents with a Master's Degree.

The thirty-first trait in consideration is "IS SOMETIMES SHY, INHIBITED". This is preferred in various levels by 3 respondents who are high school graduates, 35 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The thirty-second trait in consideration is "IS CONSIDERATE AND KIND TO ALMOST EVERYONE". This is preferred in various levels by 4 respondents who are high school graduates, 42 respondents who are students, 2 respondents who completed some college but have no degree, 1respondent who underwent Technical Training, 21 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The thirty-third trait in consideration is “DOES THINGS EFFICIENTLY”. This is preferred in various levels by 3 respondents who are high school graduates, 41 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 17 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The thirty-fourth trait in consideration is “REMAINS CALM IN TENSE SITUATIONS”. This is preferred in various levels by 3 respondents who are high school graduates, 33 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The thirty-fifth trait in consideration is “PREFERS WORK THAT IS ROUTINE”. This is preferred in various levels by 2 respondents who are high school graduates, 28 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 20 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The thirty-sixth trait in consideration is “IS OUTGOING, SOCIABLE”. This is preferred in various levels by 3 respondents who are high school graduates, 35 respondents who are students, 1 respondent who completed some college but have no degree, none of the respondents who underwent Technical Training, 14 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The thirty-seventh in consideration is “IS SOMETIMES RUDE TO OTHERS”. This is preferred in various levels by 2 respondents who are high school graduates, 26 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 14 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The thirty-eighth trait in consideration is “MAKES PLANS AND FOLLOWS THROUGH WITH THEM”. This is preferred in various levels by 3 respondents who are high school graduates, 36 respondents who are students, 1 respondent who completed some college but

have no degree, 1 respondent who underwent Technical Training, 16 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The thirty-ninth trait in consideration is "GETS NERVOUS EASILY". This is preferred in various levels by 2 respondents who are high school graduates, 29 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 14 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The fortieth trait in consideration is "LIKES TO REFLECT, PLAY WITH IDEAS". This is preferred in various levels by 4 respondents who are high school graduates, 42 respondents who are students, 2 respondents who completed some college but have no degree, 1 respondent who underwent Technical Training, 20 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The forty-first trait in consideration is "HAS FEW ARTISTIC INTERESTS". This is preferred in various levels by 3 respondents who are high school graduates, 39 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 17 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The forty-second trait in consideration is "LIKES TO COOPERATE WITH OTHERS". This is preferred in various levels by 4 respondents who are high school graduates, 43 respondents who are students, 2 respondents who completed some college but have no degree, none of the respondents who underwent Technical Training, 21 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The forty-third trait in consideration is "IS EASILY DISTRACTED". This is preferred in various levels by 3 respondents who are high school graduates, 39 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 16 respondents with a Bachelor's Degree and 9 respondents with a Master's Degree.

The forty-fourth trait in consideration is “IS SOPHISTICATED IN ART, MUSIC, OR LITERATURE”. This is preferred in various levels by 3 respondents who are high school graduates, 35 respondents who are students, 1 respondent who completed some college but have no degree, 1 respondent who underwent Technical Training, 15 respondents with a Bachelor’s Degree and 9 respondents with a Master’s Degree.

The Chi-square test of independence is used in the analysis of this data because there is no relation between the values in this data as the age groups of the respondents are independent of one another.

TABLE 9: EFFECT OF LEVEL OF EDUCATION IN SELECTING PERSONALITY CHARACTERISTICS

Personality Characteristics	High school graduate	Currently in college	Completed some college, no degree	Technical Training	Bachelor’s Degree	Master’s Degree	P*	Chi-square

4 = Agree a little
5= Agree strongly

Is considerate and kind to almost everyone

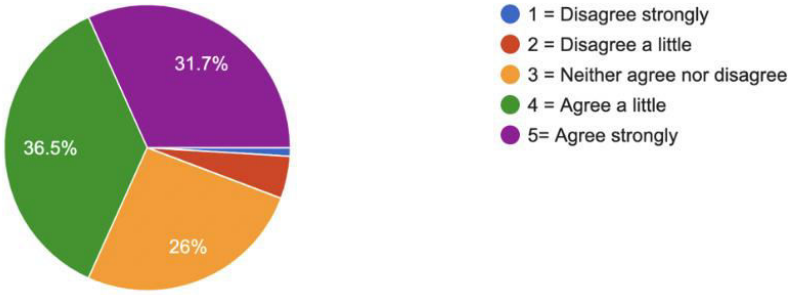

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

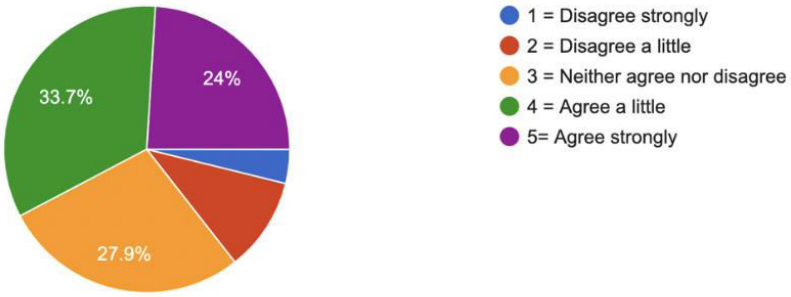

Does things efficiently

104 responses

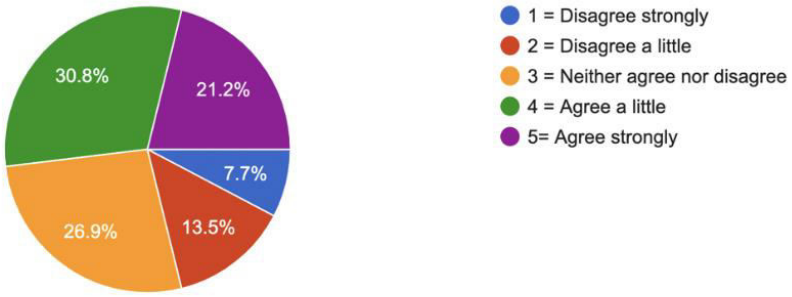

Remains calm in tense situations

104 responses

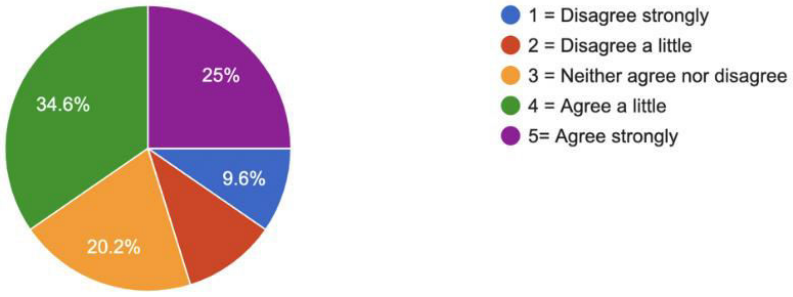

Prefers work that is routine

104 responses

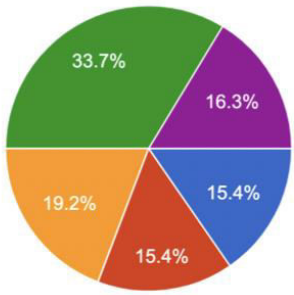

Is outgoing, sociable

104 responses

Is sometimes rude to others

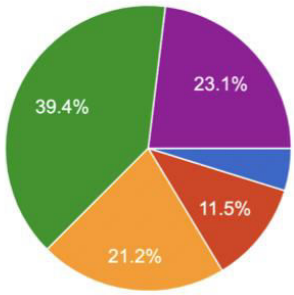

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

Makes plans and follows through with them

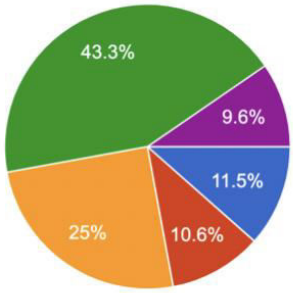

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

Gets nervous easily

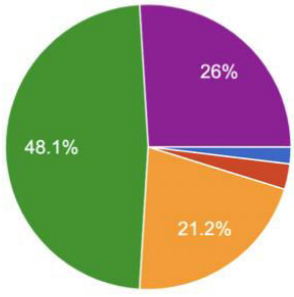

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

Likes to reflect, play with ideas

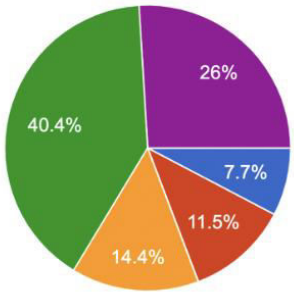

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

Has few artistic interests

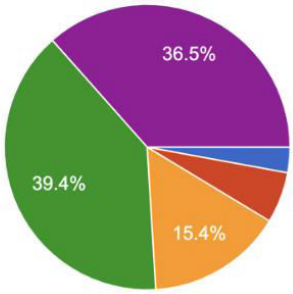

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

Likes to cooperate with others

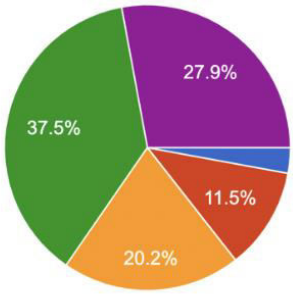

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

Is easily distracted

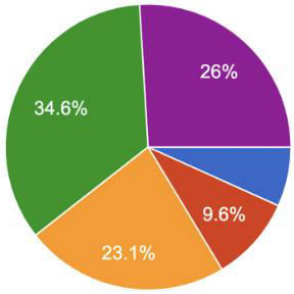

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

Is sophisticated in art, music, or literature

104 responses

1 = Disagree strongly
2 = Disagree a little
3 = Neither agree nor disagree
4 = Agree a little
5= Agree strongly

DISCUSSION

To conduct this study was a very eye-opening experience as it helped to know about the different kinds of music available out there and how a person's basic personality characteristics helped determine the kind of music that the individual preferred.

This was also greatly influenced by the age, gender and level of education. Ethnicity also played a role, but this wasn't anything major as all the individuals who responded were of different ethnicities yet had been living in the United Arab Emirates for a long part of their life hence making them ethnically different but residentially similar.

A main difficulty faced in this study was that even though the survey link was shared to a total number of 500 individuals, only 130 individuals agreed to participate in the study out of the which 26 were disqualified due to the fact that they weren't residents of the United Arab Emirates.

In this study it was proved that more males chose Intense and Rebellious music while more females stuck on to Complex and Reflective music. Also, more youngsters i.e. 18-24year olds and 25-34 chose Conventional and Upbeat music over all the other groups of music. More individuals who were actively pursuing their bachelor's degree listened to Energetic and Rhythmic closely followed by Conventional and Upbeat music.

In this study it was found that Extraversion showed a positive relation to Energetic & Rhythmic music. Other observed pointers include Agreeableness having a negative relation with Intense and Rebellious Music, Conscientiousness having a negative relation Upbeat and Conventional music, Neuroticism having a positive relation with Reflective &Complex and Openness to experience having a positive relation with Upbeat &Conventional and with Reflective & complex music .

CONCLUSION

It is conceivable to anticipate certain characteristics and practices that one could have from their inclination to music. Be that as it may, there are numerous defects to this supposition. To completely decide one's character, a concentrated character evaluation is required just as age, sexual orientation, and social qualities. Describing individuals with their music inclination may prompt bogus misrepresentations, and not effectively surveying them since everybody is novel in that issue.

Later on, it might be conceivable to precisely decide character with enough foundation data. "Future research can expand on this establishment by including a more extensive exhibit of music from different types and investigating music inclinations across ages, societies, what's more, social settings. Such work will serve to illuminate our comprehension regarding the idea of music inclinations and its significance in individuals' lives" (Rentfrow and Goldburg and Levitin, 2012).

The results of this study demonstrate that the melodic inclinations of youngsters are identified with the character factors of internality, standard acknowledgment, and feeling of self-acknowledgment and mental coordination. Apparently, the kind of music a youthful individual likes to tune in to might be demonstrative of certain character factors. The discoveries of this investigation propose a general pattern among youngsters to have melodic tastes which might be viewed as predictable with their character direction.

Nonetheless, the consequences of this examination likewise recommend that music inclination additionally works in blend with other music listening practices, for example, level of music contribution and one's utilization of music. As such, it is inferred that the connection among character and music inclinations is an unpredictable issue and that an information on a youthful individual's melodic inclinations doesn't as of now license exact character expectation or order.

The aftereffects of this investigation show that there is a relationship between the character factors contemplated and level of music inclusion among youngsters. Be that as it may, the relationship isn't sufficiently able to warrant the utilization of level of music contribution as a

character arrangement gadget. The character factors utilized in this investigation represented just a little level of the difference in the music association scores, demonstrating that different elements impact level of music contribution.

At long last, the aftereffects of this investigation show that the connection among character and one's utilization of music is an intricate wonder best concentrated on an individual premise. While the consequences of this study demonstrate that there is a connection between youthful people groups' utilization of music and music inclination, the relationship has all the earmarks of being complex and would be best concentrated on an individual premise.

The aftereffects of this examination show that youngsters all in all use music principally as an aide to different exercises, and besides, as a method of improving or adjusting their mind-set state. The consequences of this examination show that the importance or utilization of music among youthful individuals is moderately inconsequential to melodious substance and that gender related contrasts exist regarding the significant employments of music among youngsters.

The consequences of this investigation plainly recommend that the relationship among character and the music listening practices of music inclination, level of music association, and music utilizes is a complex matter and it is suggested that this relationship be concentrated on an individual premise. Music listening practices work in blend with character factors. Hence, it is suggested that future considerations look at the interrelatedness of these music listening practices in arrangement with character. A made to order approach, using meeting strategies, would all the more unmistakably distinguish the particular importance a youngster connects to their music tuning in practices.

The entirety of the subjects in this investigation were volunteers and the self-selected idea of this example may have presented predisposition, constraining the generalizability of the discoveries. It is suggested that an irregular test be used in resulting considers and that the example be enormous enough to allow satisfactory portrayal as far as the music listening conduct classifications.

Furthermore, the entirety of the subjects in this examination were understudies and future research ought to incorporate a progressively heterogeneous populace. Different proportions

of character and music inclination, level of music inclusion, and employments of music might be considered in future contemplates.

At last, the causal associations between music listening practices and character ought to be investigated. Future investigations are required to decide the degree to which music listening practices basically fill in as an impression of character or act to influence an audience's character advancement or potentially working.

In outline, a few scientists have investigated music inclinations and how music identified with scholarly as well as intellectual execution just as different factors including character and enthusiastic prosperity (i.e., suicidality). Inadequate research is accessible on the elements of music in individuals' lives. Music seems to work as a medium to improve subjective/scholarly execution, mind-set, inspiration, and is utilized in instructive and otherworldly/strict settings, psychotherapy and restoration settings, just as for individual use. While there is a broad writing on adapting all in all, little is known about the relationship of music inclinations and music work on adapting techniques. We need to get familiar with how music inclinations and music capacity may serve in making a difference individuals adapt to explicit stressors in their everyday lives, which is the reason for the present study.

ANNEXURE I- THE QUESTIONNAIRE

WELCOME TO THE QUESTIONNAIRE

Thank you for agreeing to take part in this important study about mind- music connection in order to help determine personality according to The Short Test Of Music Preferences-Revised (STOMP-R) by Rentfrow& Gosling and The Big Five Inventory by John & Srivastava.

DEMOGRAPHIC QUESTIONS

1. Gender
    - Male
    - Female
    - Other:
2. Age
    - Under 12 years old
    - 12-17 years old
    - 18-24 years old
    - 25-34 years old
    - 35-44 years old
    - 45-54 years old
    - 55-64 years old
    - 65-74 years old
    - 75 years or older
3. What is the highest degree or level of school you have completed? If currently enrolled, indicate the highest degree received.
    - Less than 12 years
    - Currently in high school
    - High school graduate
    - Currently in college

- Completed some college, no degree
- Technical Training
- Bachelor's Degree
- Master's Degree
- Doctorate Degree

4. What is your primary cultural or racial identification?

    - African
    - Chinese
    - Indian
    - Latino
    - Middle Eastern
    - Mixed
    - Other Asian
    - White Caucasian

MUSIC PREFERENCES

INSTRUCTIONS

You will now be presented with 23 musical excerpts with its genre stated and the excerpt in the link provided. Each excerpt is 15-seconds long. Please indicate your degree of liking for each after listening till the end.

1. Alternative

    - 1 = Dislike strongly
    - 2 = Dislike moderately
    - 3 = Dislike a little
    - 4 = Neither like nor dislike
    - 5 = Like a little
    - 6 = Like moderately
    - 7 = Like strongly

2. Bluegrass

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

3. Blues

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

4. Classical

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

5. Country

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little

- 6 = Like moderately
- 7 = Like strongly

6. Dance/ Electronica

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

7. Folk

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

8. Funk

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

9. Gospel

- 1 = Dislike strongly

- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

10. Heavy Metal

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

11. World Music

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

12. Jazz

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately

- 7 = Like strongly

13. New Age

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

14. Oldies

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

15. Opera

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

16. Pop

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

17. Punk

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

18. Rap/ Hip-hop

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

19. Reggae

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little

- 6 = Like moderately
- 7 = Like strongly

20. Religious

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

21. Rock

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

22. Soul/RnB

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

23. Soundtracks/ Theme songs

- 1 = Dislike strongly
- 2 = Dislike moderately
- 3 = Dislike a little
- 4 = Neither like nor dislike
- 5 = Like a little
- 6 = Like moderately
- 7 = Like strongly

PERSONALITY CHARACTERISTICS

Here are 44 characteristics that may or may not apply to you. For example, do you agree that you are someone who likes to spend time with others? Please choose an option to indicate the extent to which you agree or disagree with that statement.

I SEE MYSELF AS SOMEONE WHO

1. Is talkative

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

2. Tends to find fault with others

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

3. Does a thorough job

- 1 = Disagree strongly

- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

4. Is depressed, blue.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

5. Is original, comes up with new ideas

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

6. Is reserved

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

7. Is helpful and unselfish with others.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

8. Can be somewhat careless.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

9. Is relaxed, handles stress well

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

10. Is curious about many different things

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

11. Is full of energy.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

12. Starts quarrels with others.

- 1 = Disagree strongly
- 2 = Disagree a little

- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

13. Is a reliable worker

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

14. Can be tense

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

15. Is ingenious, a deep thinker.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

16. Generates a lot of enthusiasm.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree

- 4 = Agree a little
- 5 = Agree strongly

17. Has a forgiving nature.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

18. Tends to be disorganized .

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

19. Worries a lot.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

20. Has an active imagination.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

21. Tends to be quiet

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

22. Is generally trusting

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

23. Tends to be lazy.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

24. Is emotionally stable, not easily upset

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

25. Is inventive.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little

- 5 = Agree strongly

26. Has an assertive personality .

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

27. Can be cold and aloof .

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

28. Perseveres until the task is finished.

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly

29. Can be moody

- 1 = Disagree strongly
- 2 = Disagree a little
- 3 = Neither agree nor disagree
- 4 = Agree a little
- 5 = Agree strongly
